

September 2025

Zoning & Land Use Assessment Accessible Public Transit Hubs Research

Outcomes of Focus

TOPIC	DESCRIPTION
Affordable Housing	Diverse and affordable housing options (subsidized, affordable, workforce/middle, market, luxury) are available in every neighborhood including for the job insecure and unhoused populations
Strong Business Corridors	Strong and vibrant business corridors with diverse business opportunities to support the economic needs and resiliency of every community
Limited Pollution Exposure	All neighborhoods feature low levels of pollution, taking into account cumulative impacts on overburdened communities
Accessible Public Transit Hubs	All communities feature public transit options that are convenient and reliable, and serve hubs with housing, businesses, recreation and other services
Productive Land Use	All land in communities is used productively, meaning beneficial to local residents and aligned with community needs
Available Groceries and Healthcare	Affordable grocery options and healthcare providers are accessible in all neighborhoods
Mitigation and Adaptation to Climate Change	All communities feature green infrastructure and energy-efficient building stock that both mitigates and adapts to climate change

Research Questions and Key Findings

RESEARCH QUESTIONS	KEY FINDINGS
<p><i>Understand the outcome:</i></p> <p><i>How accessible is the transit system to Chicagoans?</i></p>	<ul style="list-style-type: none"> Chicago's bus network serves 99 percent of residents who live within a 1/2 mile of lines. But rapid transit is different: Less than 15 percent of residents live within a 1/4 mile of an L station, and less than half of residents live within a 1/4 mile of the CTA's planned frequent bus network. Areas near transit stations retained more population than elsewhere in the city, but the population of Black residents near the L has decreased Rents and income grew more quickly near transit stations than elsewhere in the city.
<p><i>Understand the zoning:</i></p> <p><i>What levels of density and types of uses are currently permitted by Chicago's zoning code, near rail transit?</i></p>	<ul style="list-style-type: none"> High densities are permitted near transit—but almost exclusively downtown and east of the Red Line corridor. On arterial streets citywide, a mix of uses and moderate-density apartments are allowed. But within a half mile of rail transit stations, very low density, single-use zoning remains common—even along some of the city's most popular corridors, like the north Blue and Brown Lines.
<p><i>Understand the relationship:</i></p> <p><i>What is the association between zoning and transit in specific areas and with specific demographics?</i></p>	<ul style="list-style-type: none"> Mixed-use and high-density zoning are both more common near transit than otherwise—but most land near L stations is still zoned for low density residential. By-right zoning of this sort has become less common, being replaced by PDs. Higher-density zoning near transit is more common in areas with racial diversity that matches the city. Residents who live in high density residential zoning areas in central, North, and West parts of the city have the greatest access to jobs by transit. Most city-owned land is near transit, and only a small portion is zoned for high density and mixed use.

Understand the Outcome

How accessible is the transit system to Chicagoans?

- Chicago's bus network serves 99 percent of residents who live within a 1/2 mile of lines. But rapid transit is different: Less than 15 percent of residents live within a 1/4 mile of an L station, and less than half of residents live within a 1/4 mile of the CTA's planned frequent bus network.
- Areas near transit stations retained more population than elsewhere in the city, but the population of Black residents near the L has decreased
- Rents and income grew more quickly near transit stations than elsewhere in the city.

Transit options in Chicago

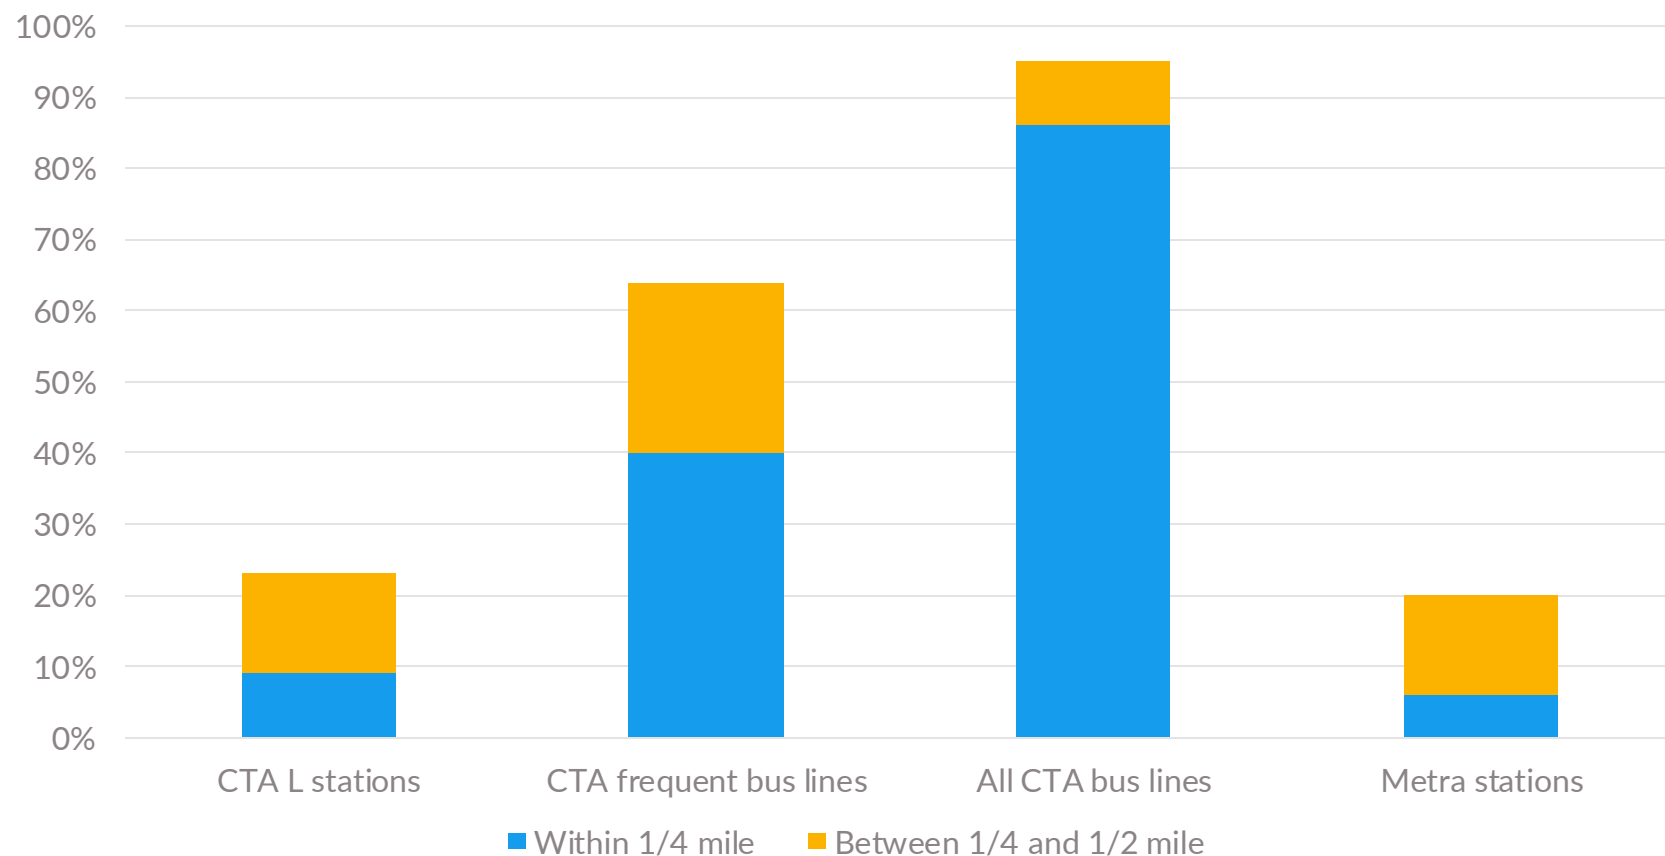

- CTA L service
- ◇— Metra service
- CTA current and planned frequent bus network
- Other CTA bus routes

Frequent routes (fall 2025): 4 Cottage Grove; J14 Jeffery Jump; 20 Madison; 34 S Michigan; 47 47th; 49 Western; 53 Pulaski; 54 Cicero; 55 Garfield; 60 Blue Island/26th; 63 63rd; 66 Chicago; 77 Belmont; 79 79th; 82 Kimball/Homan; 95 95th. Planned: 9 Ashland; 12 Roosevelt; 72 North; 81 Lawrence.

Most of Chicago's land area is located near bus service, but less than a quarter is located within a half mile of L stations

Share of Chicago land near transit services

Excludes land area occupied by Midway and O'Hare Airports. Pace also provides bus service in Chicago, and South Shore provides rail service. Their routes, however, are almost entirely overlapping with CTA and Metra services. The above data are non-exclusive, meaning some people live near multiple service; these are double-counted. We calculate distances from routes, not stations, for the bus lines.

Almost 50 percent of the city's population lives within a half-mile of L stations, and more than 70 percent live within a half-mile of a frequent bus line

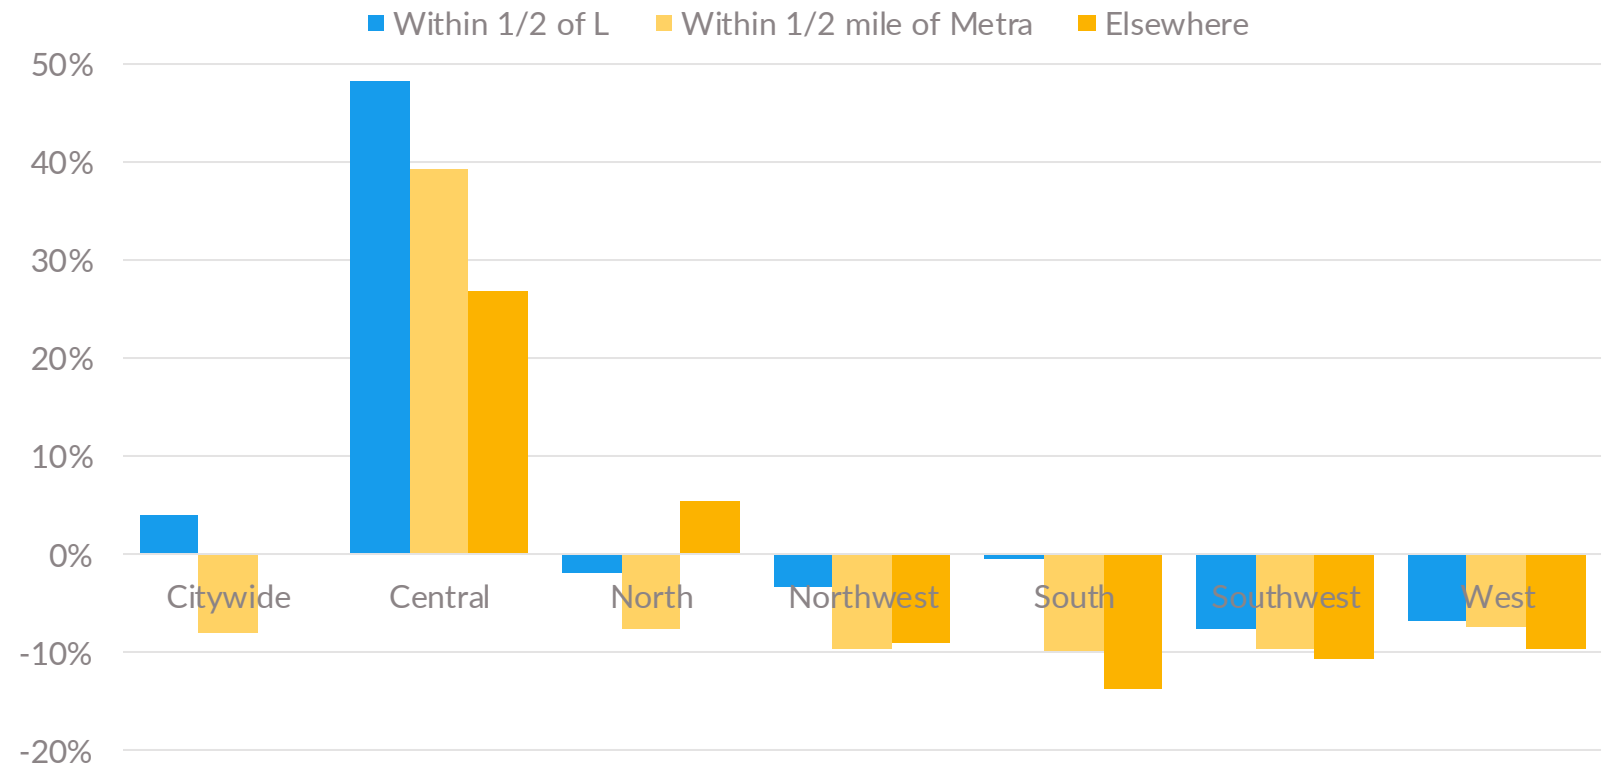

Excludes land area occupied by Midway and O'Hare Airports. Pace also provides bus service in Chicago, and South Shore provides rail service. Their routes, however, are almost entirely overlapping with CTA and Metra services. The above data are non-exclusive, meaning some people live near multiple service; these are double-counted. We calculate distances from routes, not stations, for the bus lines.

Planning Regions: Definitions

In every area but the North Side, areas near the L gained or retained more population than other parts of the community.

Change in population, by adjacency to transit network, 2005-09 to 2019-23

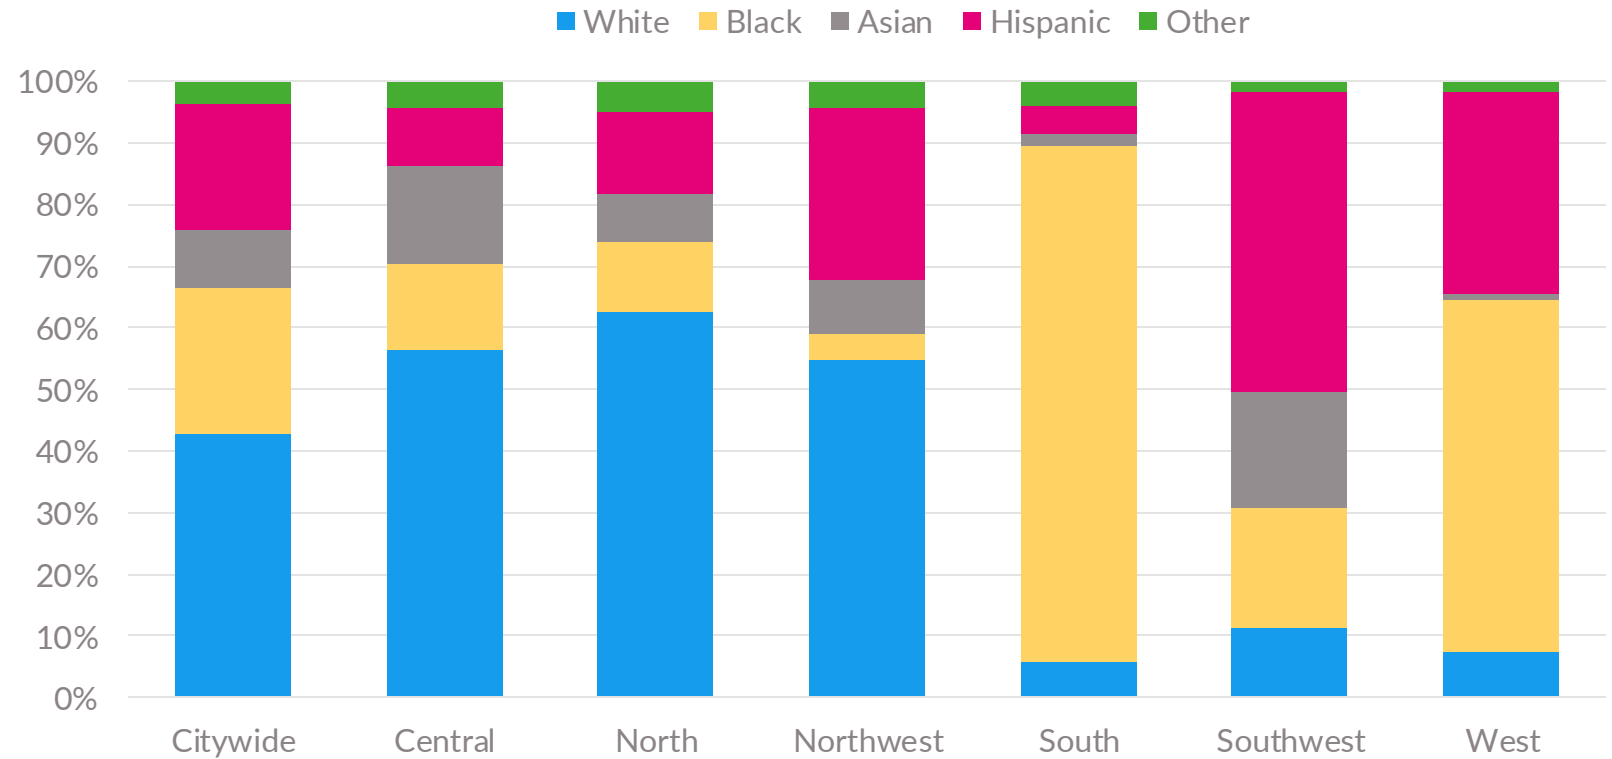

US Census ACS 2005-09 and 2019-23 five-year data at the tract level, adjusted for inflation.

Areas within a 1/2 mile of Metra and a 1/2 mile of L are counted as within a 1/2 mile of L.

Demographics of areas near the L system differ dramatically based on part of the city

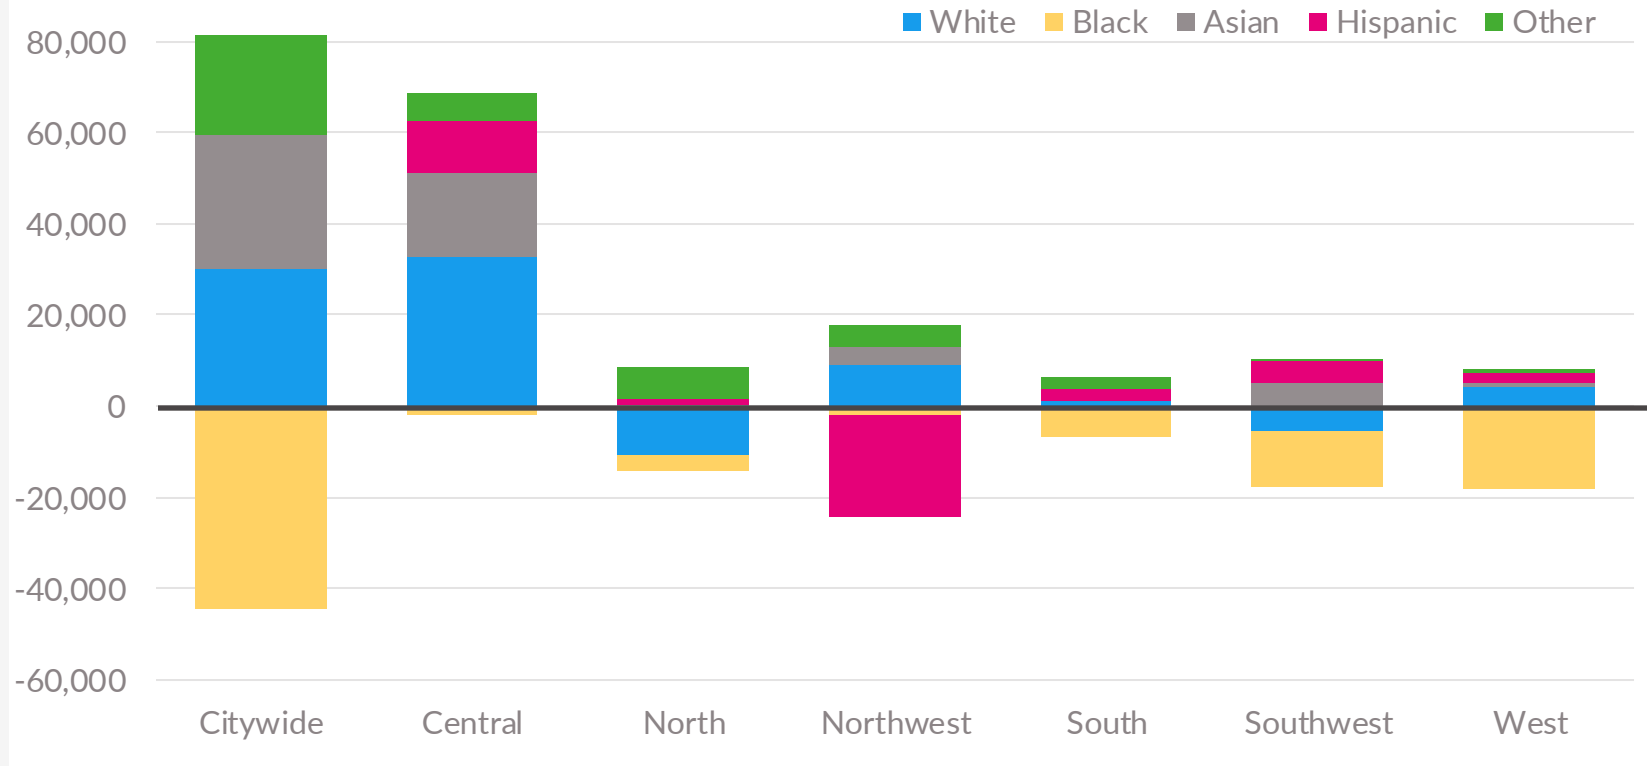

Racial and ethnic demographics in neighborhoods located within a 1/2 mile of L stations

US Census ACS 2019-23 five-year data at the tract level.

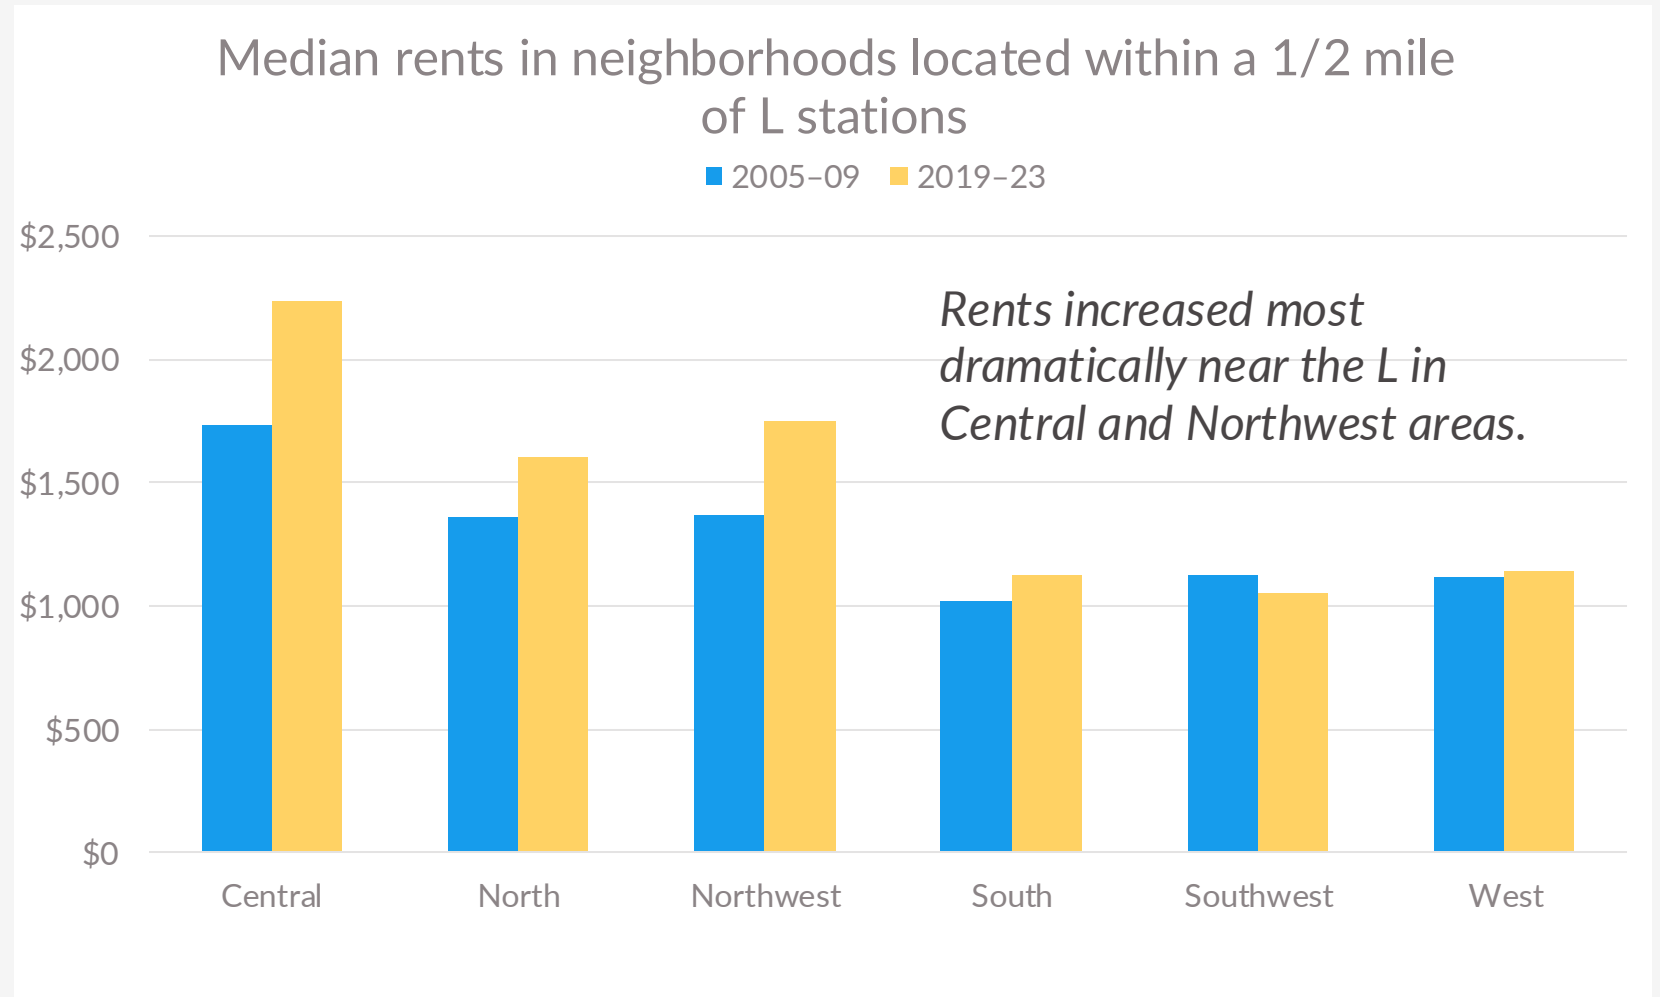

Black population loss near the L is happening citywide; Hispanic population near the L has remained relatively flat

Numerical change in racial and ethnic demographics from 2007 to 2021 in neighborhoods located within a 1/2 mile of L stations

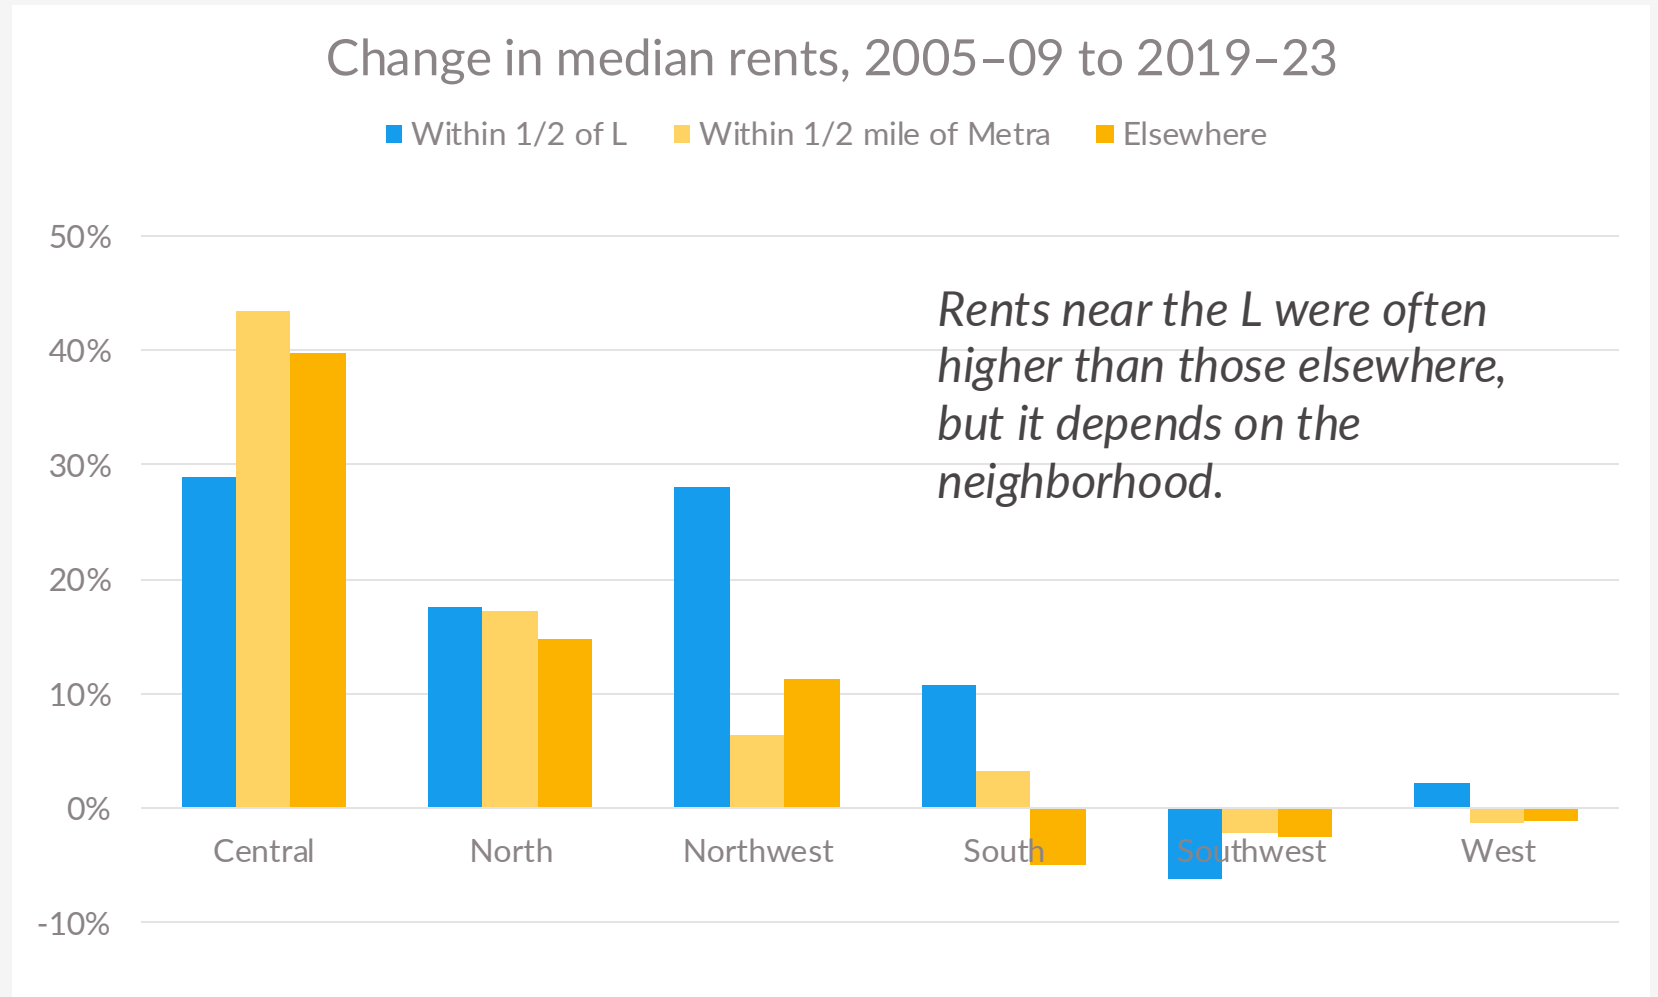

US Census ACS 2005-09 and 2019-23 five-year data at the tract level.

Rents in areas near L stations have grown most quickly in central and North parts of the city

US Census ACS 2005-09 and 2019-23 five-year data at the tract level, adjusted for inflation.

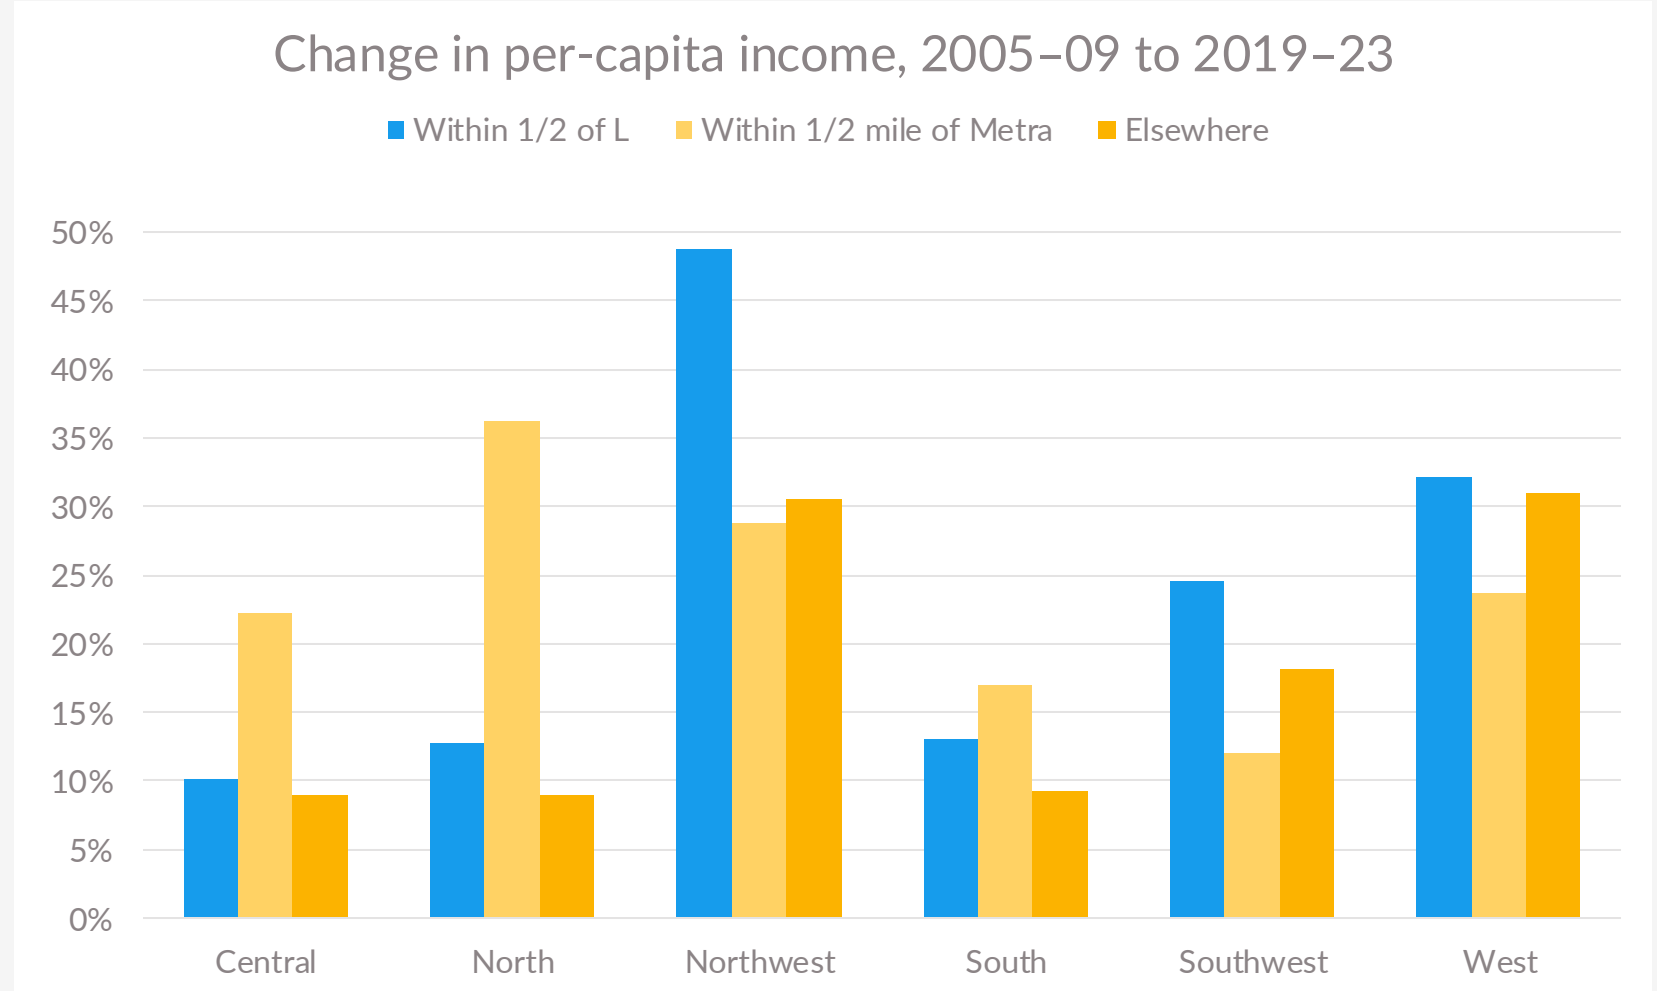

Rents tended to grow more quickly near the L or near Metra stations than elsewhere

US Census ACS 2005–09 and 2019–23 five-year data at the tract level, adjusted for inflation.

Areas within a 1/2 mile of Metra and a 1/2 mile of L are counted as within a 1/2 mile of L.

Incomes tended to increase more quickly near L and Metra services

US Census ACS 2005–09 and 2019–23 five-year data at the tract level, adjusted for inflation.

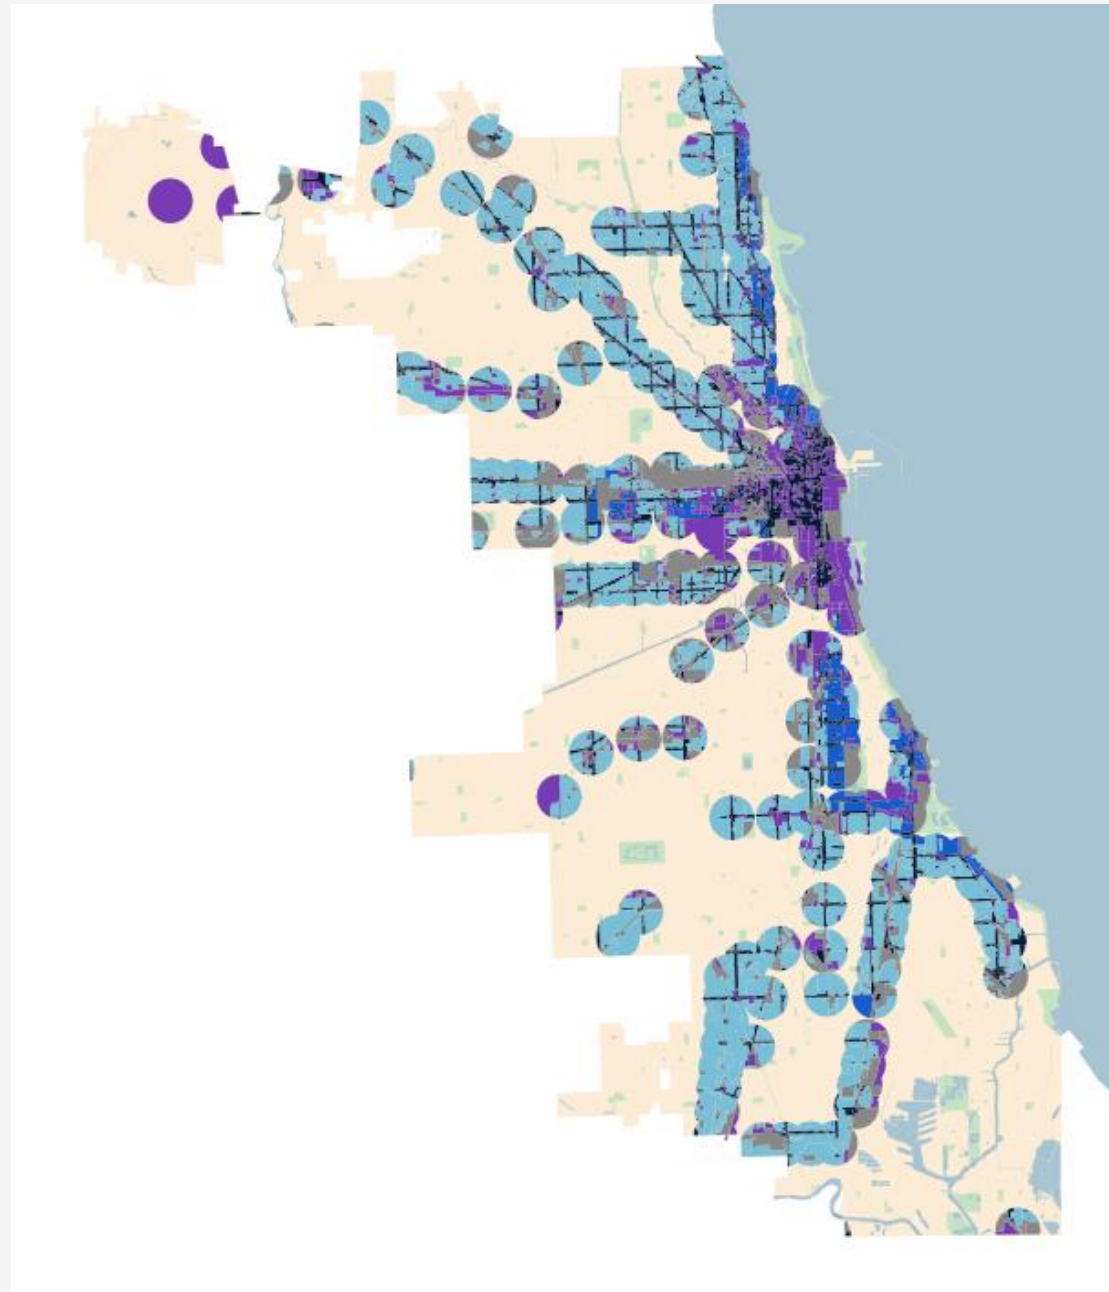

Areas within a ½ mile of Metra and a ½ mile of L are counted as within a ½ mile of L.

Understand the Zoning

What levels of density and types of uses are currently permitted by Chicago's zoning code, near rail transit?

- High densities are permitted near transit—but almost exclusively downtown and east of the Red Line corridor.
- On arterial streets citywide, a mix of uses and moderate-density apartments are allowed.
- But within a half mile of rail transit stations, very low density, single-use zoning remains common—even along some of the city's most popular corridors, like the north Blue and Brown Lines.

Zoning near rail transit stations

Mixed use
- B, C, and D except C3 and DS

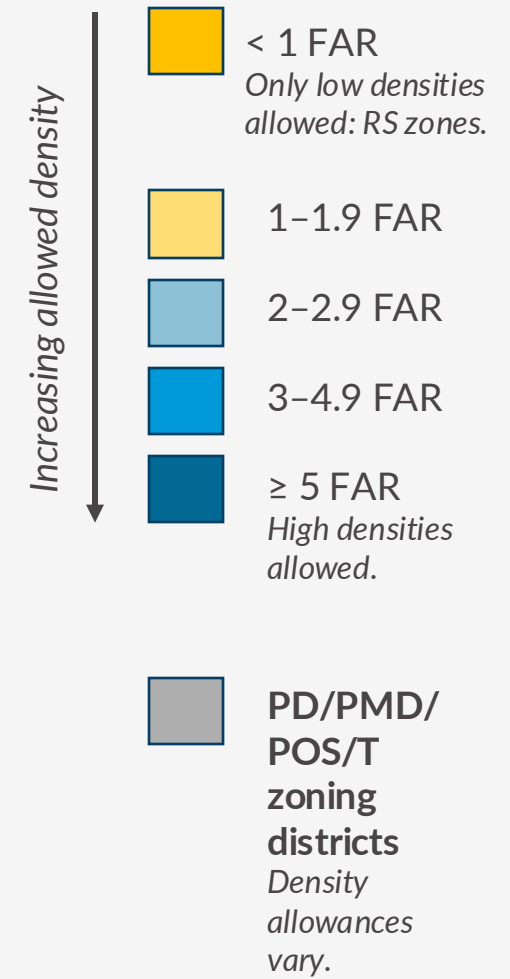

High-density residential
- RM

Low- and medium density residential
- RS, RT

PD
- PD

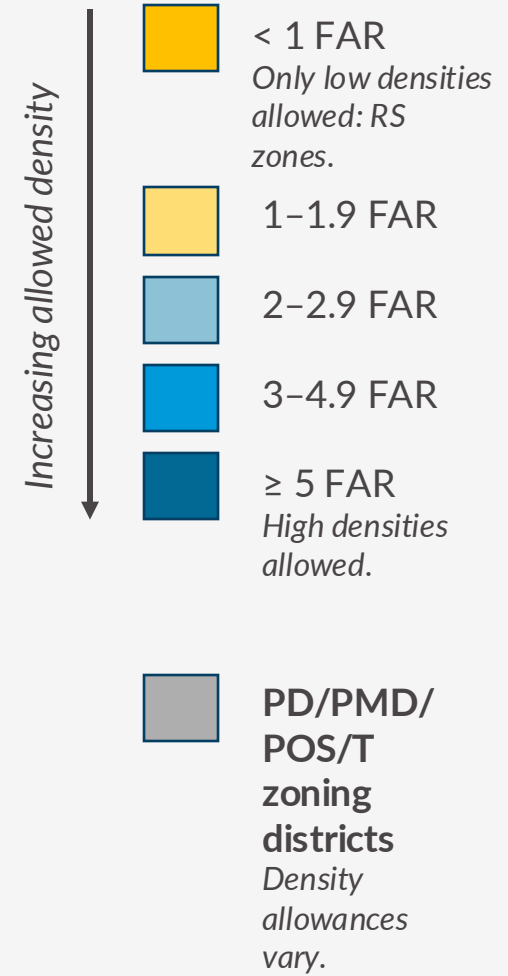

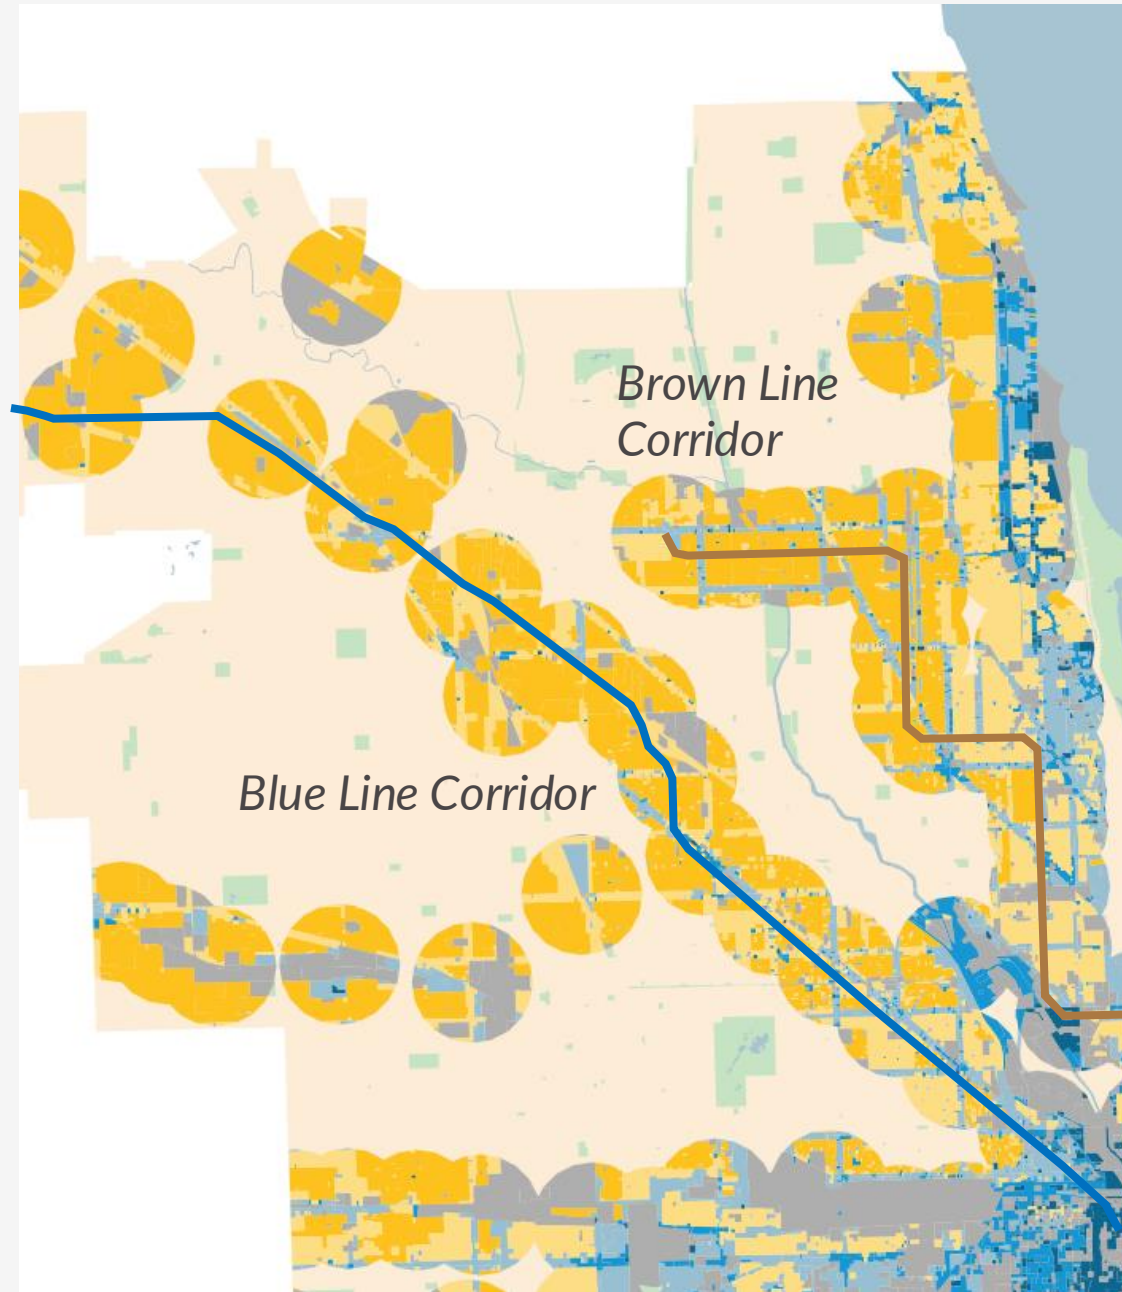

Non-residential
- C3/DS, M, PMD, POS, T

Higher density zoning is rare around rail transit stations

Map highlights area within a 1/2 mile of Metra and CTA L stations. FAR = floor area ratio, a measure of density.

Higher density zoning is less common away from downtown and the lakefront; moderate density allowed on arterials

Map highlights area within a ½ mile of Metra and CTA L stations. FAR = floor area ratio, a measure of density.

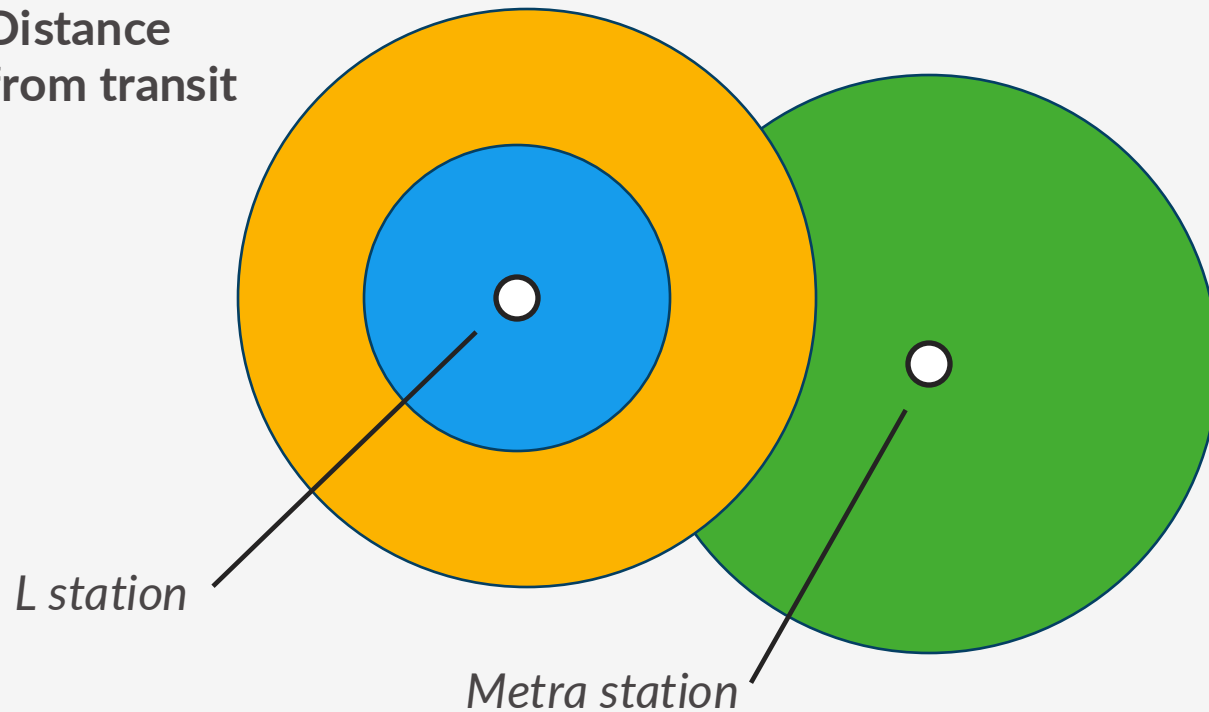

Understand the Relationship

What is the association between zoning and transit in specific areas and with specific demographics?

- Mixed-use and high-density zoning are both more common near transit than otherwise—but most land near L stations is still zoned for low density residential.
- By-right zoning of this sort has become less common, being replaced by PDs.
- Higher-density zoning near transit is more common in areas with racial diversity that matches the city.
- Residents who live in high density residential zoning areas in central, North, and West parts of the city have the greatest access to jobs by transit.
- Most city-owned land is near transit, and only a small portion is zoned for high density and mixed use.

Studying the link between transit and zoning: Definitions

Distance from transit

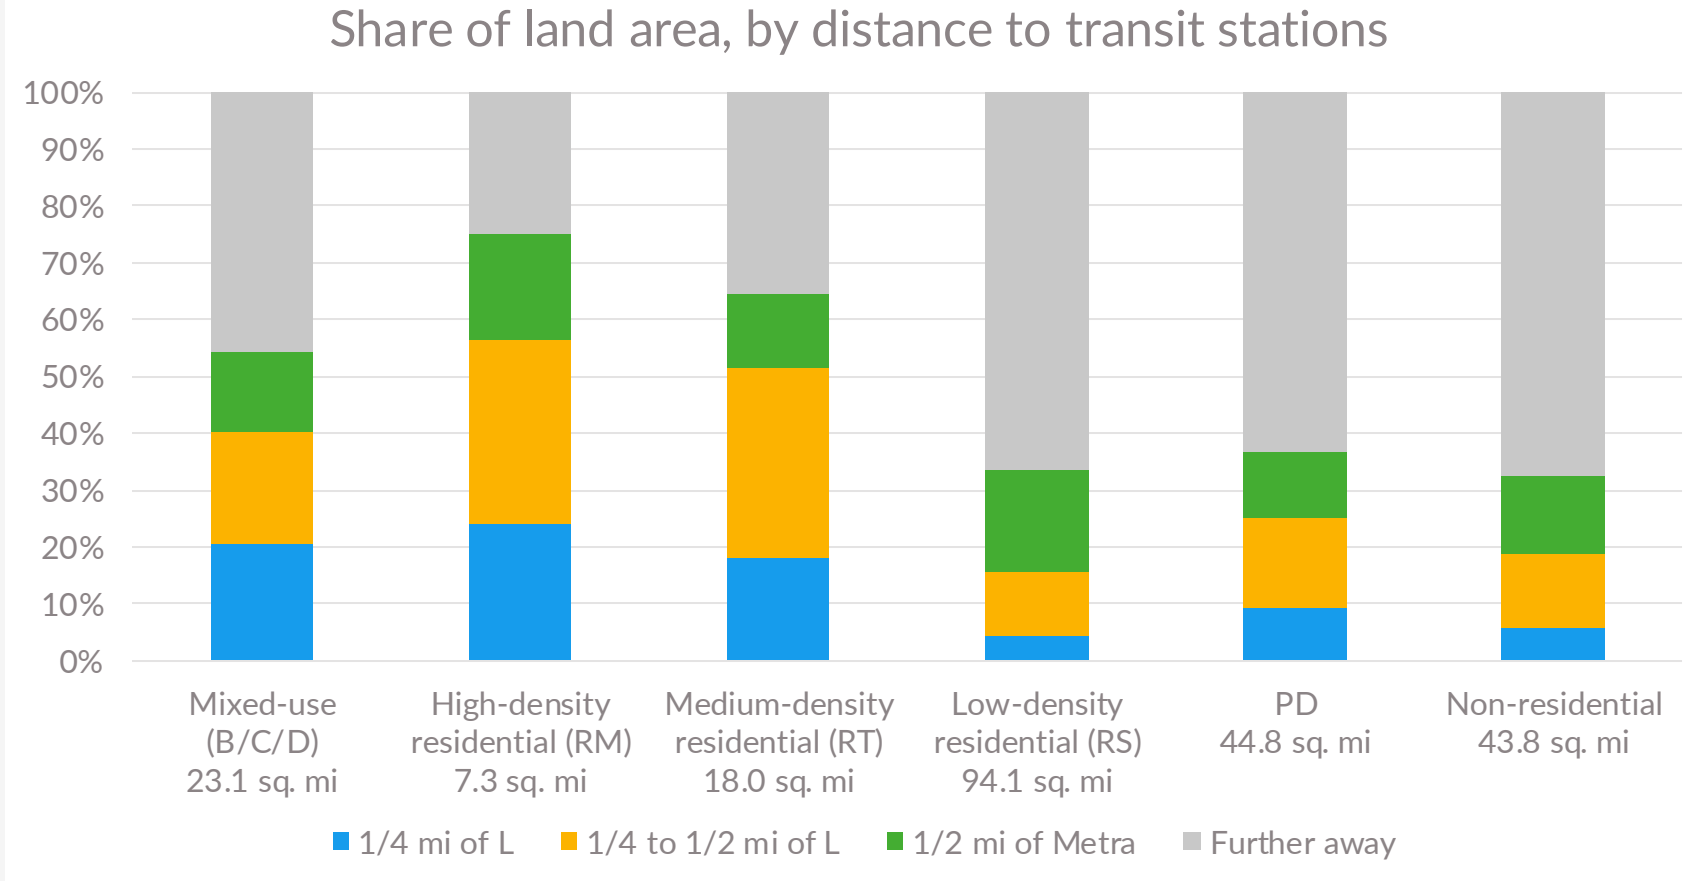

- ¼ mile from L station, a 5-minute walk
- ¼ to ½ mile from L station, a 10-minute walk
- ½ mile from Metra station (excludes overlapping area near L*)

Zoning types

				
<u>Mixed use</u> - B, C, and D except C3 and DS	<u>High-density residential</u> - RM (multifamily apartments)	<u>Medium, Low-density res.</u> - RS, RT (single-family homes and townhomes)	<u>PD</u> - PD	<u>Non-residential</u> - C3/DS, M, PMD, POS, T

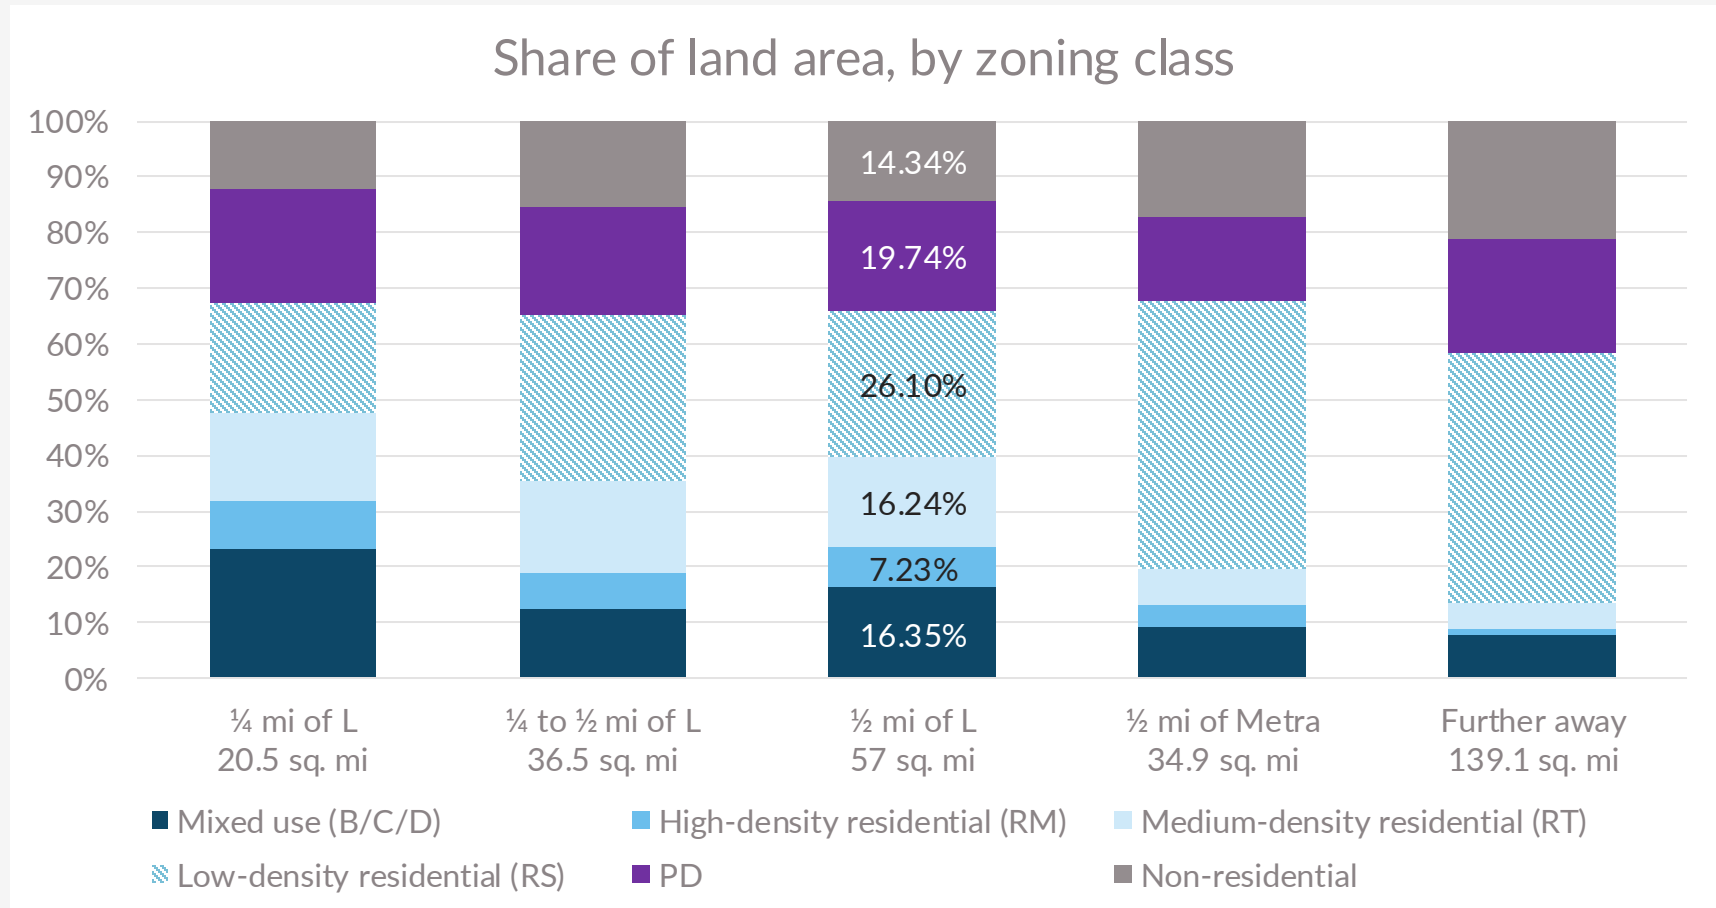

* Of the 43.3 sq. miles in the city within a ½ mile of Metra stations, 9 sq. miles (21% is also within a ½ mile of L stations; we classify these intersected areas in terms of their distance from L stations to avoid overlapping data.

Current policy concentrates most zoning for a mix of uses and higher densities near transit citywide

Example reading of this graph: In Chicago, 24.1 square miles of land area is zoned for mixed-use B, C, or D districts. Of those areas, 20.8% of land is located within a quarter mile of an L station, and 20.4% of land is located between 1/4 and 1/2 mile of an L station.

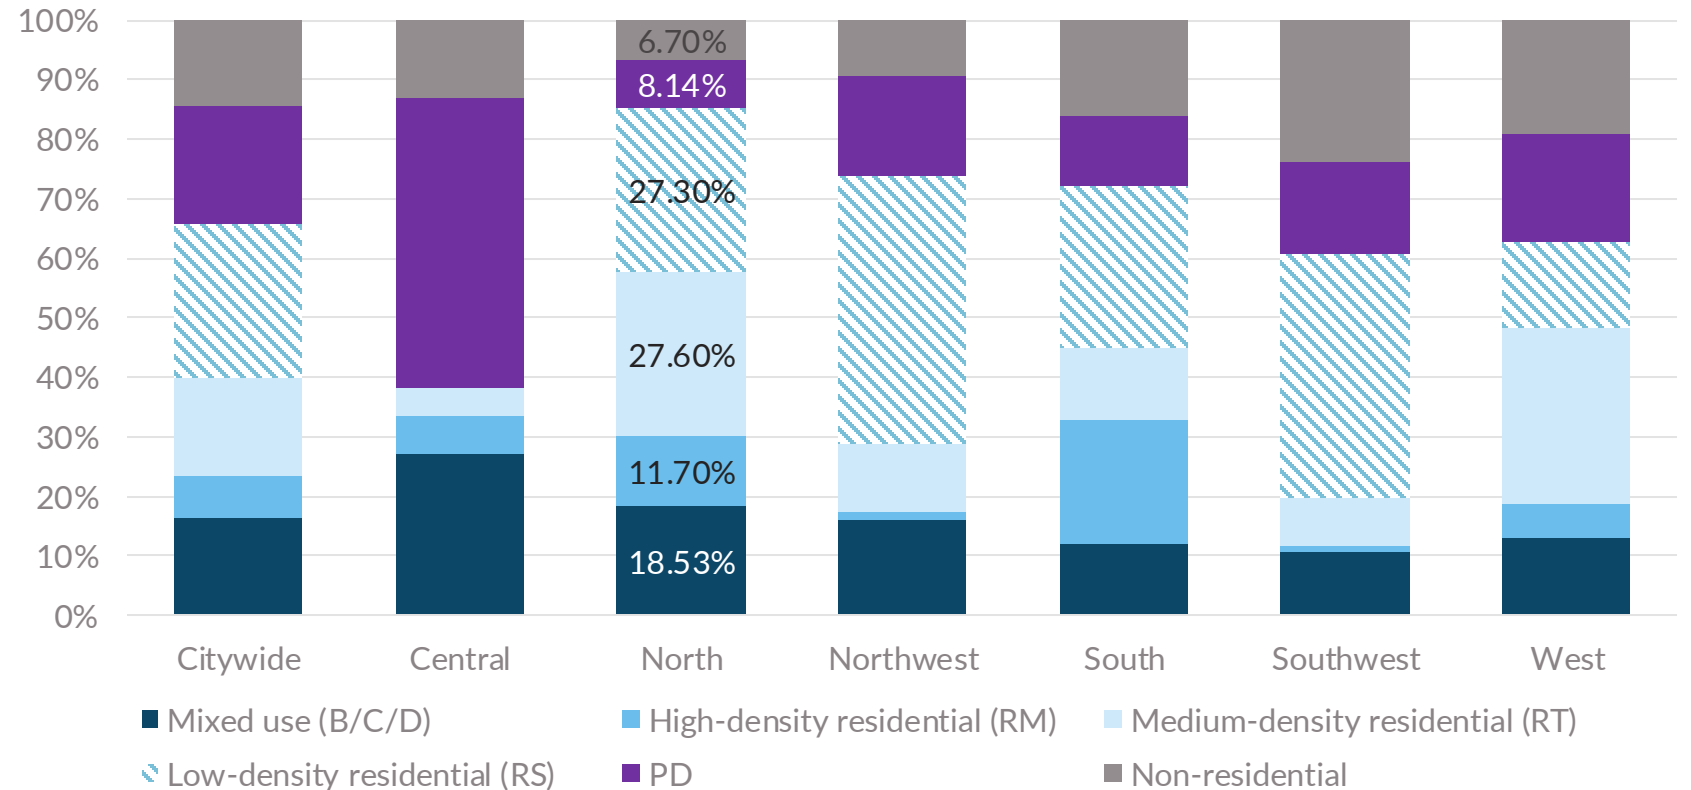

...But, even close to L stations, low-density residential zoning predominates citywide

Example reading of this graph: In Chicago, 20.5 square miles of land area is located within a quarter mile of an L station. Of those areas, 8.5% of land is zoned for high-density residential and 17.5% of land is zoned for a PD use.

Outside of central areas, most land near L stations is zoned for low density or non-residential uses

Share of land area, by zoning class, within 1/2 mile of L stations

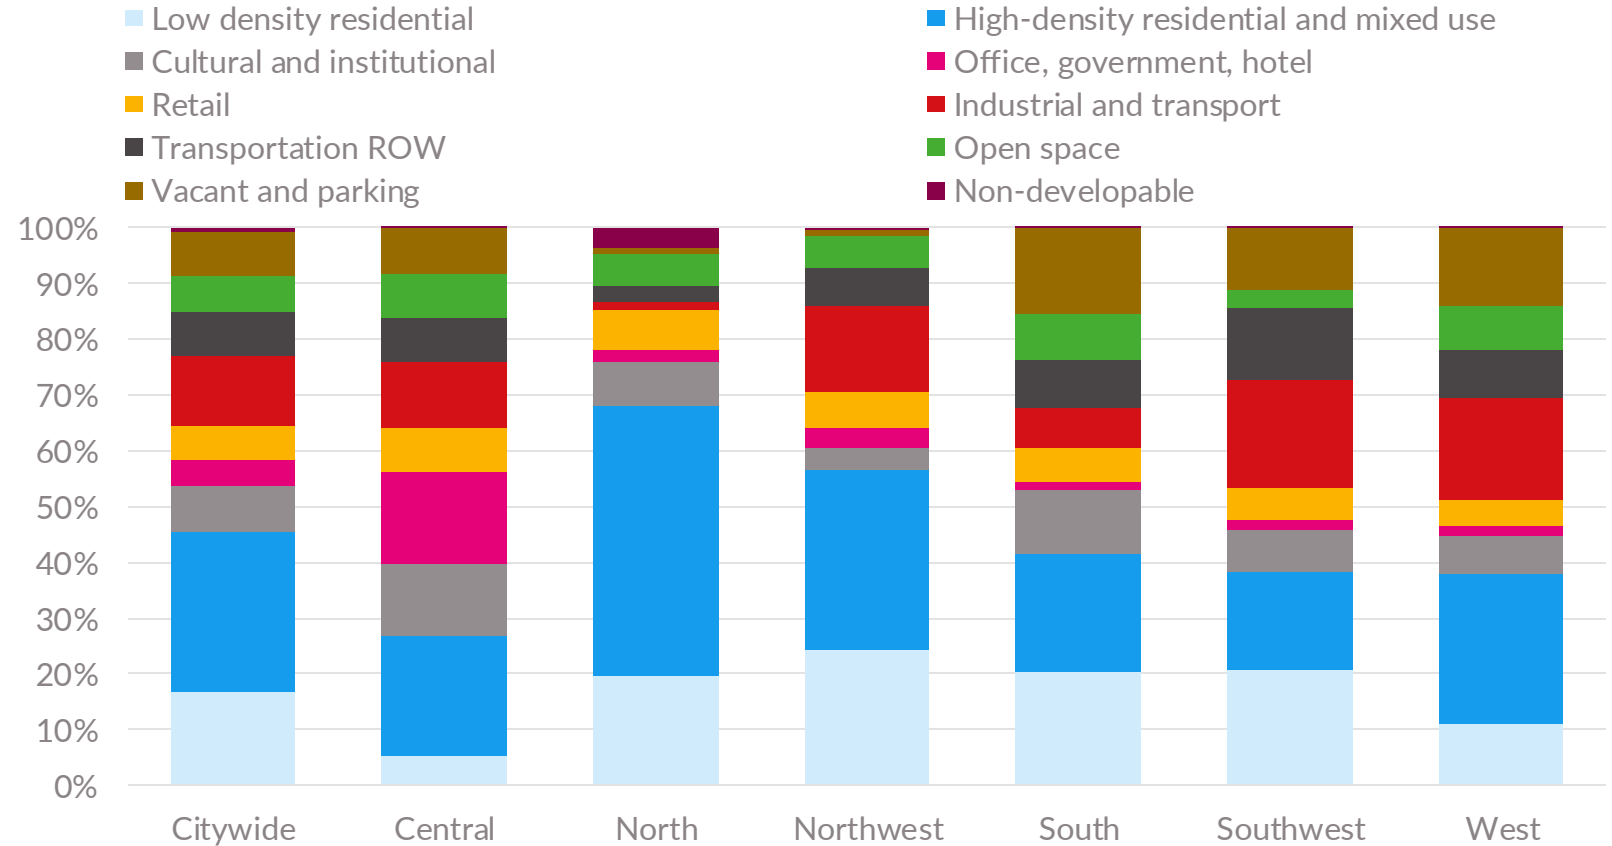

Example reading of this graph: On the North Side, 18.5% of land area located within a 1/2 mile of the L is zoned for mixed-use.

Though actual land use near the L has a smaller proportion of low density residential.

Land use of areas near L stations, 2020

Land use in neighborhoods located within a 1/2 mile of L stations

CMAP land use inventory, 2020. Excludes streets and rivers.

Land use of areas near L stations, 2001

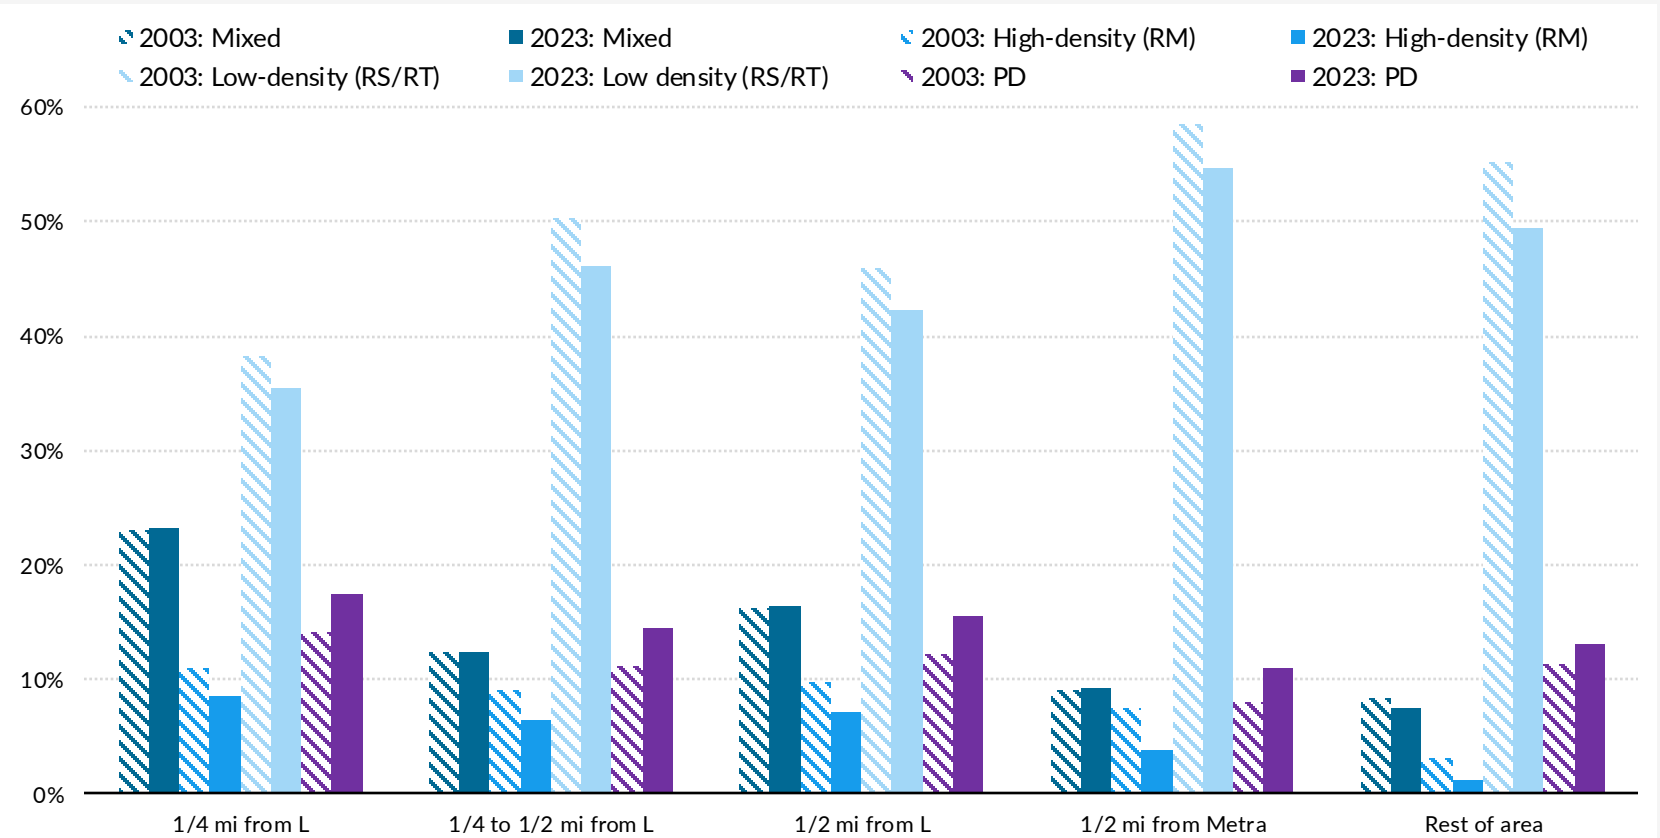

Land use in neighborhoods located within a 1/2 mile of L stations

CMAP land use inventory, 2001. Excludes streets and rivers.

By-right residential zoning has become less common, near and far from transit, as PDs have taken their place

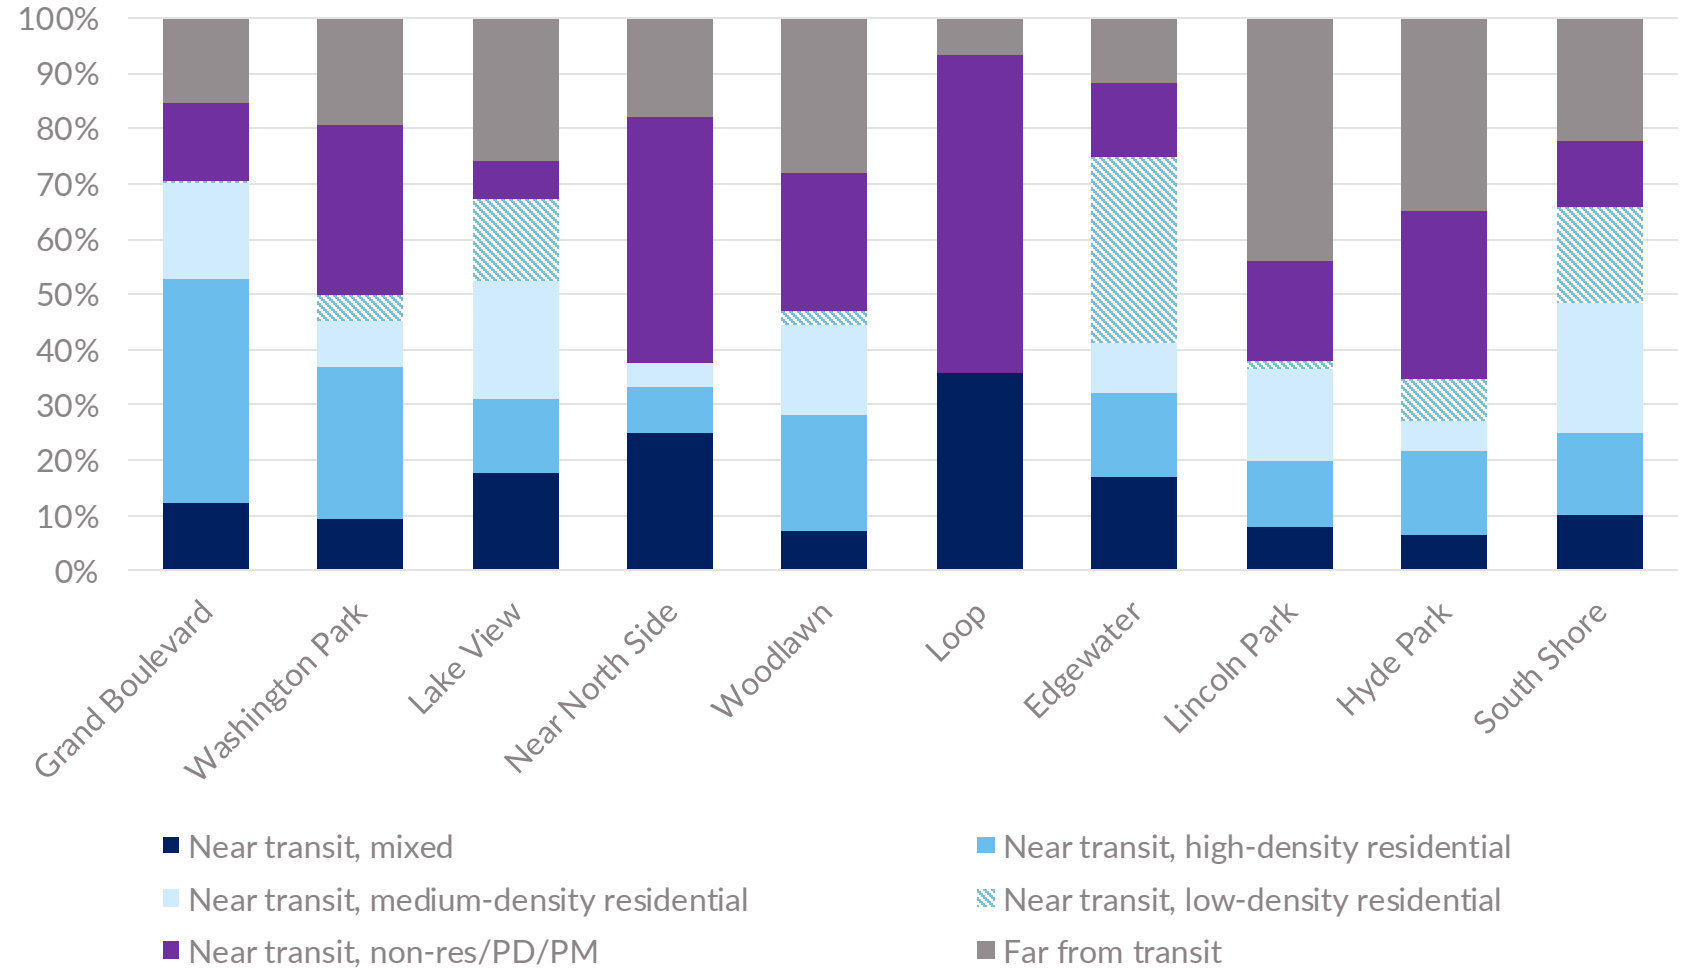

Share of land area, by zoning class, 2003 and 2023

As planned developments have become more common, by-right development, both for high- and low-density residential, has become less common. Land zoned for mixed uses has remained similar.

In certain community areas, zoning for a mix of uses and high densities is relatively prioritized near transit

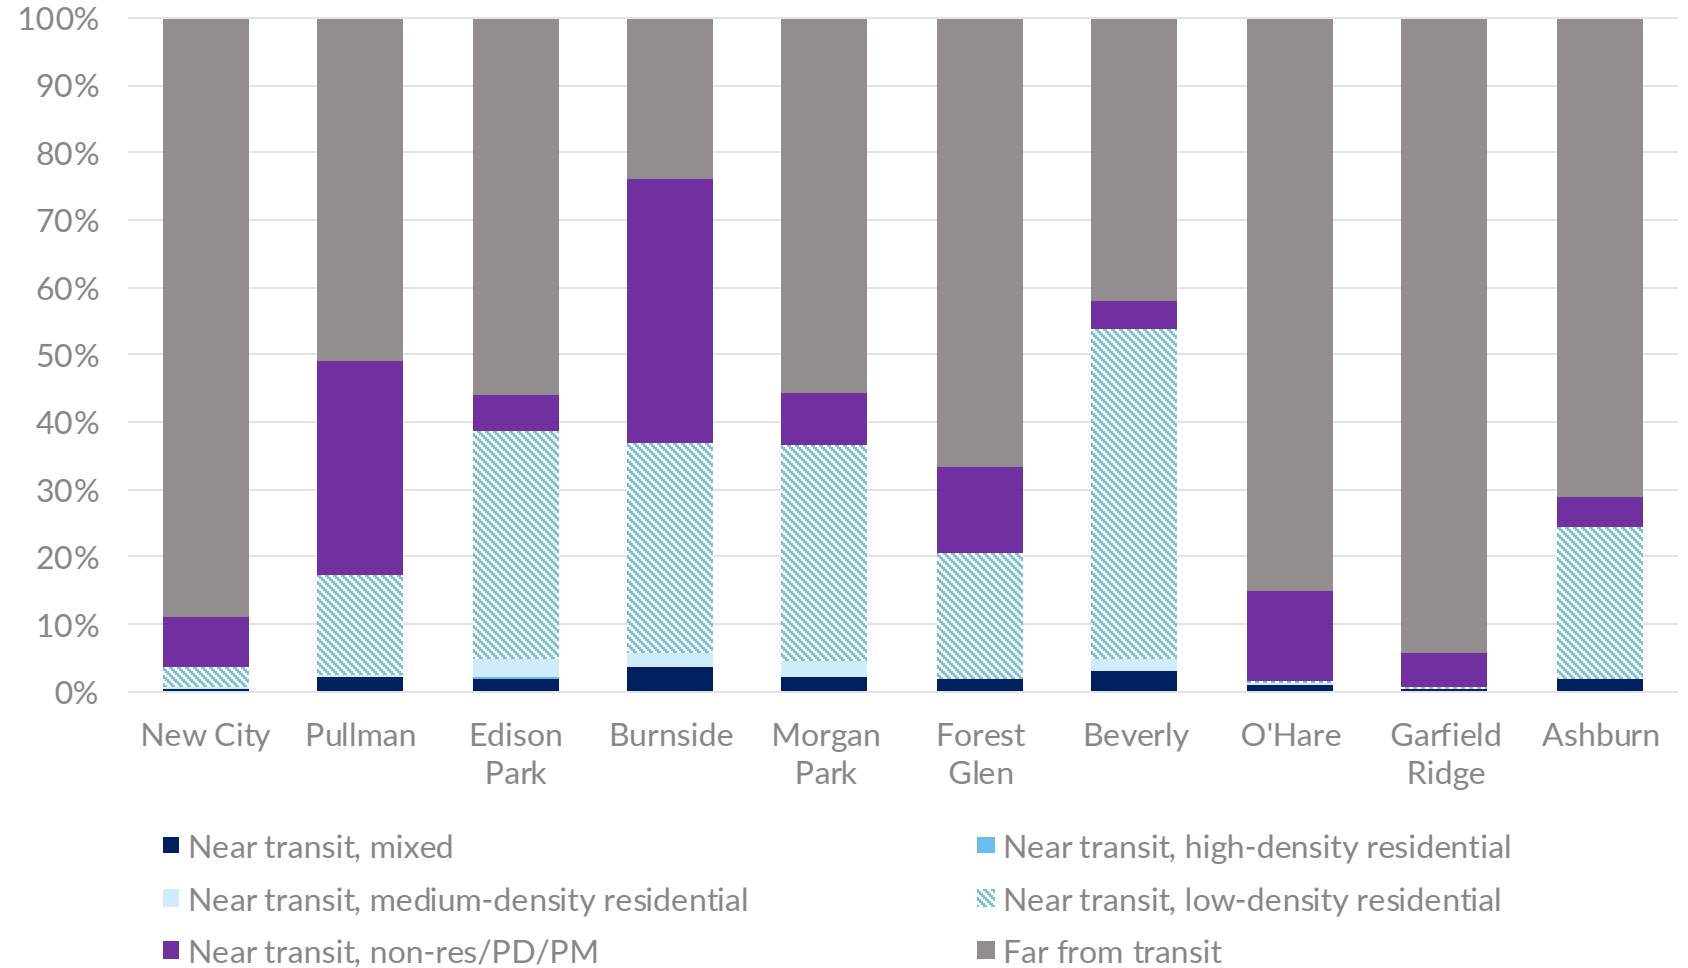

Community areas with the highest share of land near transit zoned for a mix of uses and high-density residential

Near transit defined as within a half-mile of an L or Metra station.

But in others, such zoning is rare near transit

Community areas with the lowest share of land near transit zoned for a mix of uses and high-density residential

Near transit defined as within a half-mile of an L or Metra station.

Community areas where you might expect high-density zoning... but it's rare, even near transit

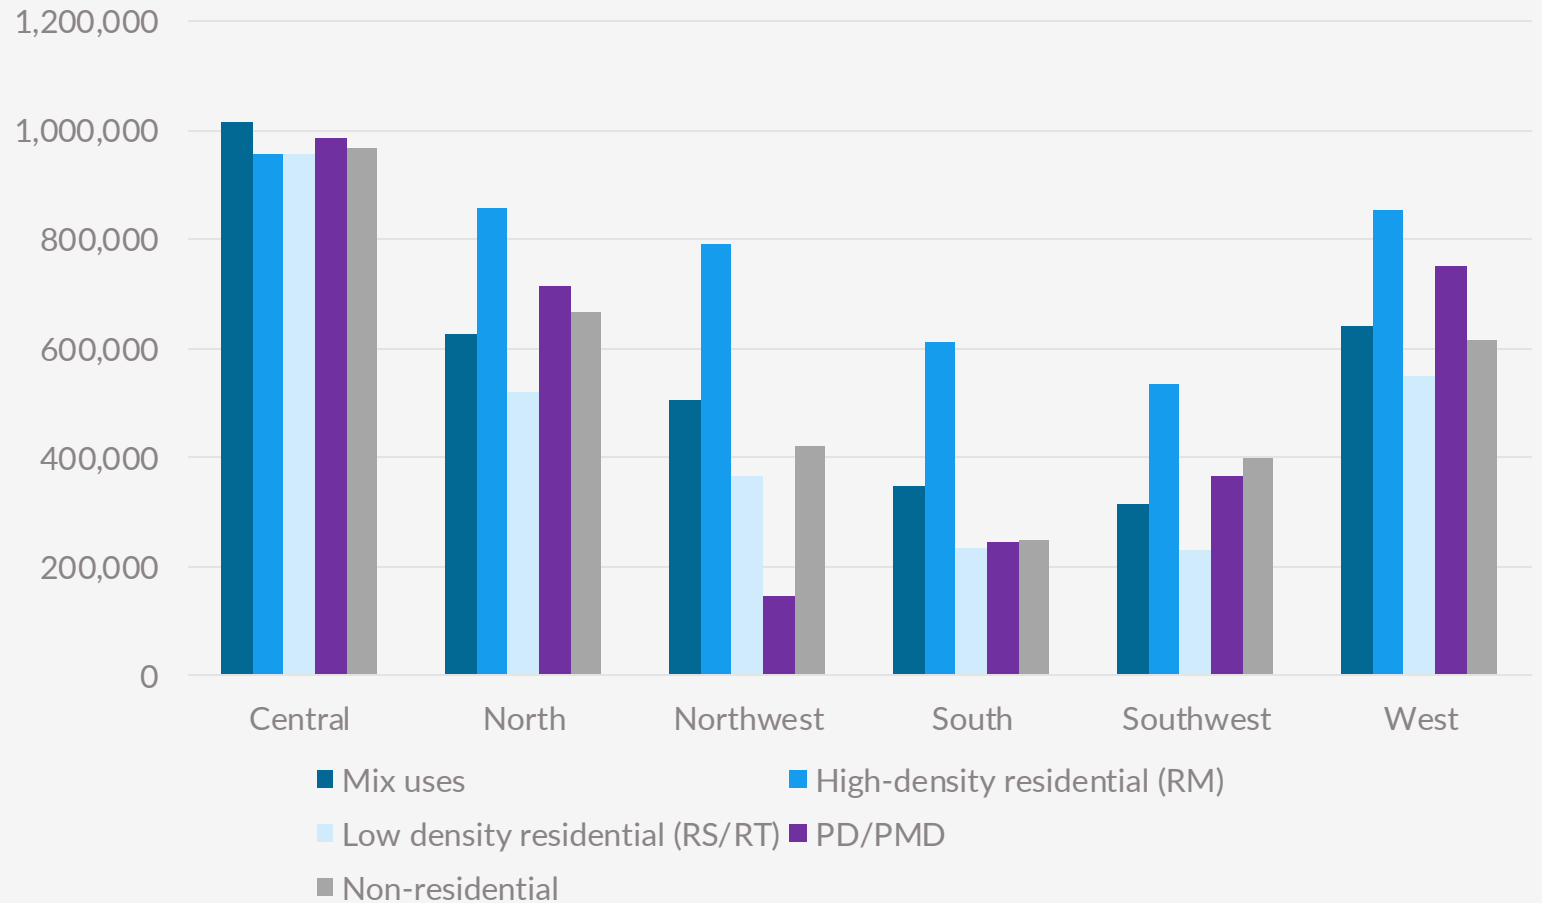

Community area, classified in terms of their zoning near transit

Near transit defined as within a half-mile of an L or Metra station.

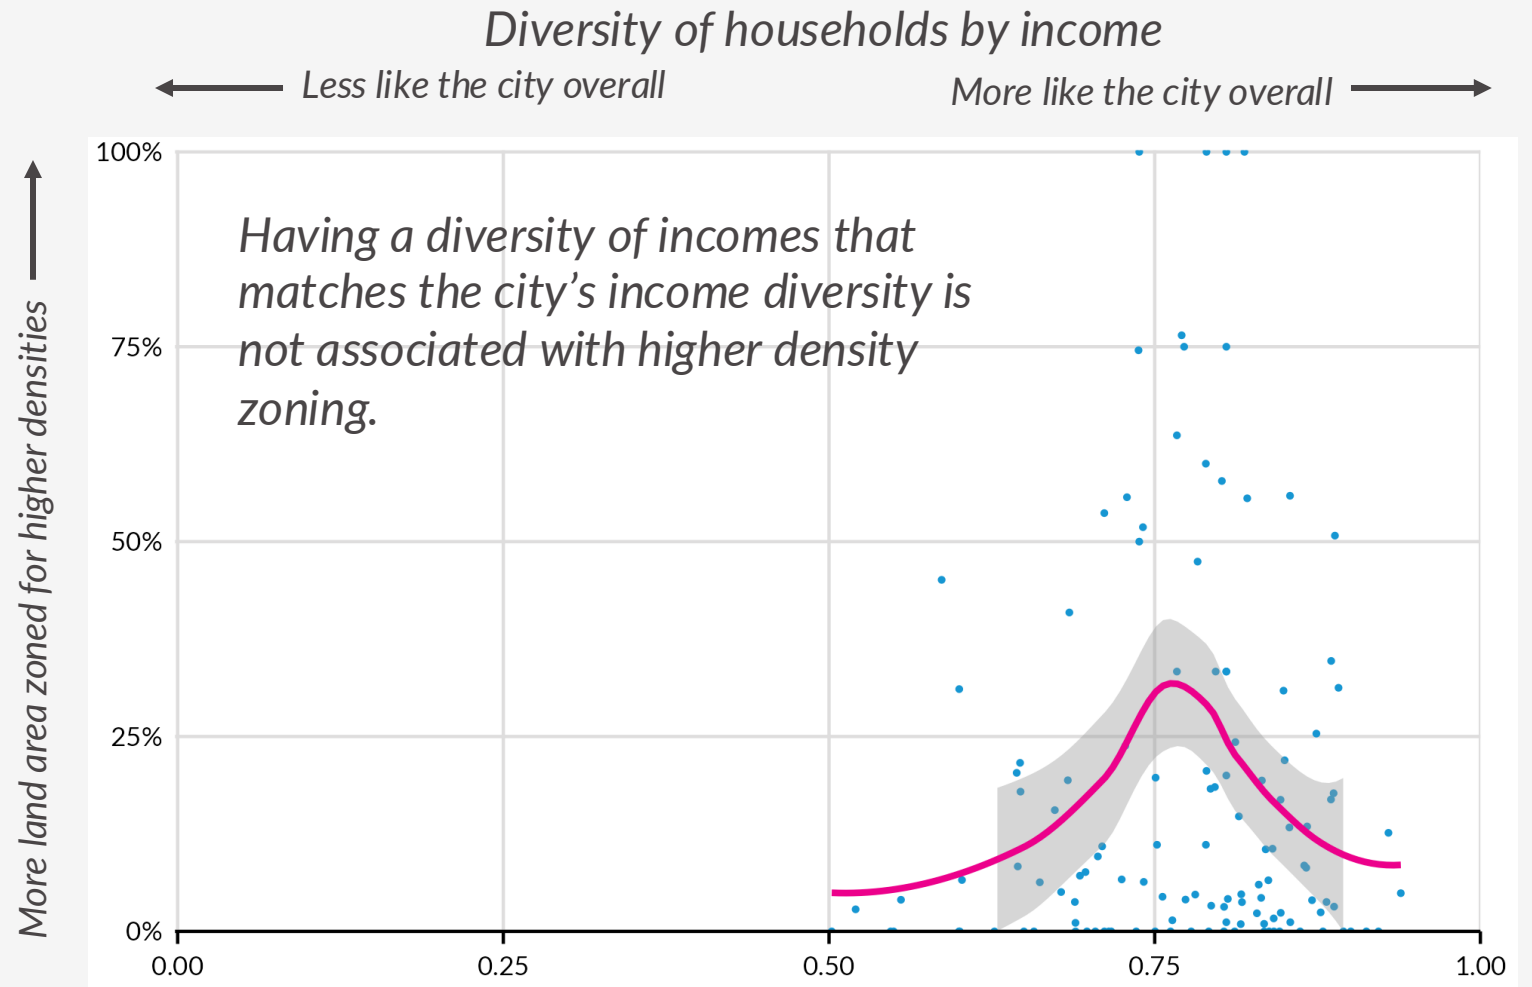

Residents who live in high density residential zoning in central, North, and West parts of the city have better access to jobs by transit than those on the South and Southwest Sides

Average jobs accessible in 30 minutes by transit, by area and zoning category

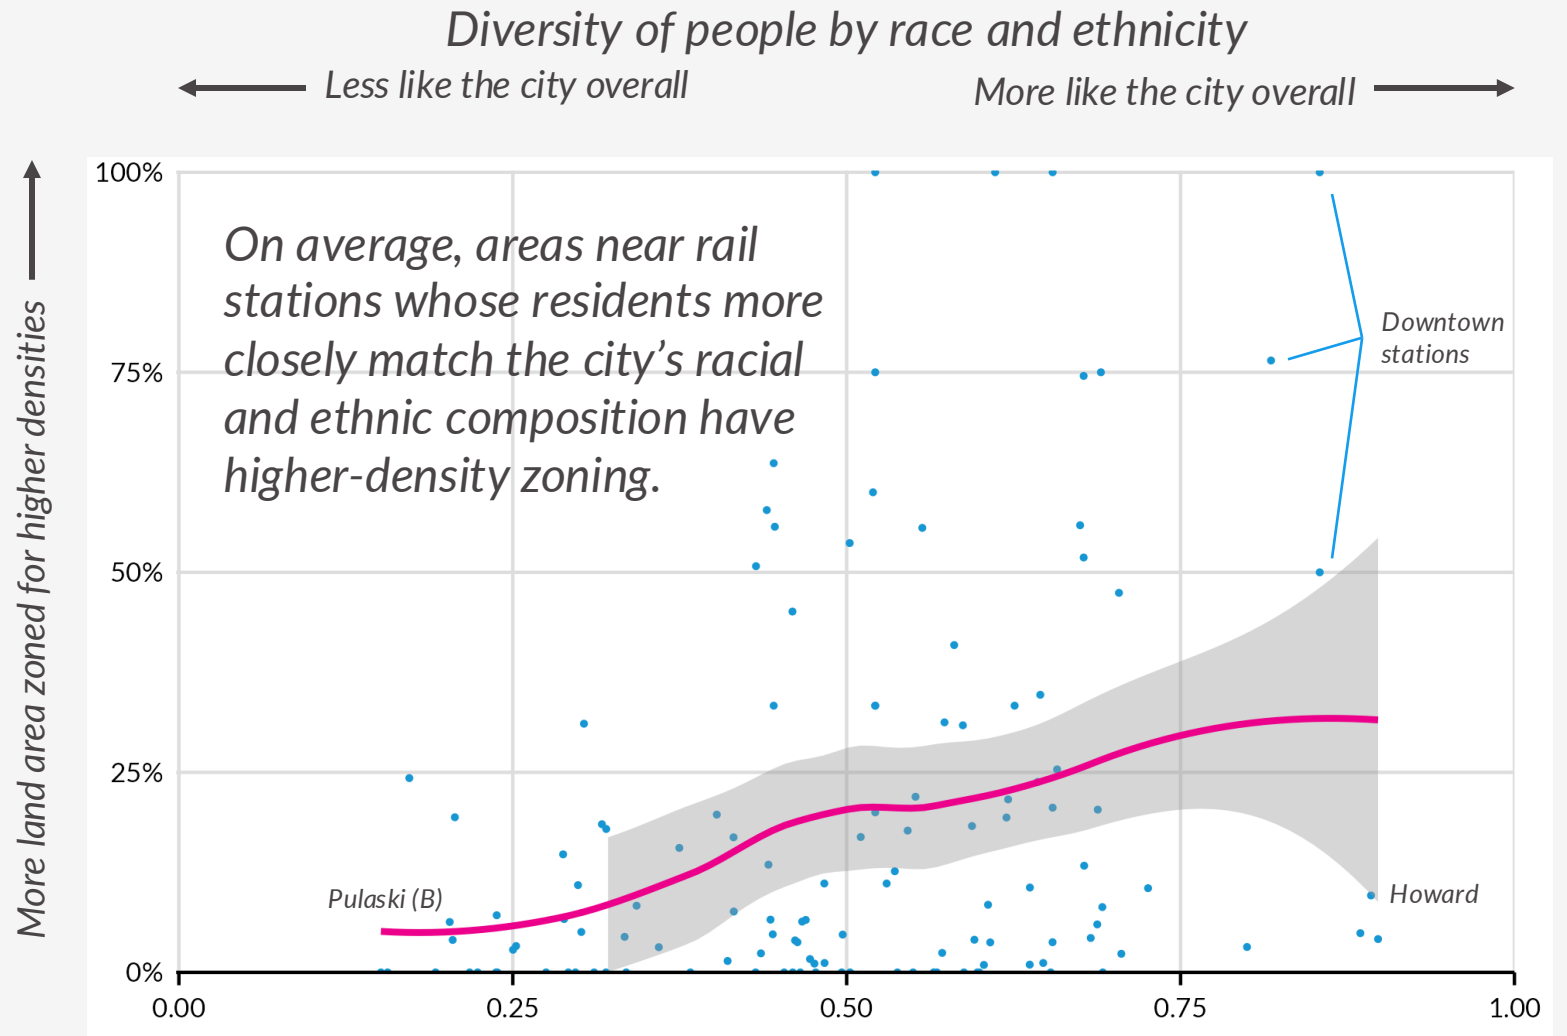

Center for Neighborhood Technology, All Transit database, 2024

There is no clear relationship between local income composition and density in areas near transit

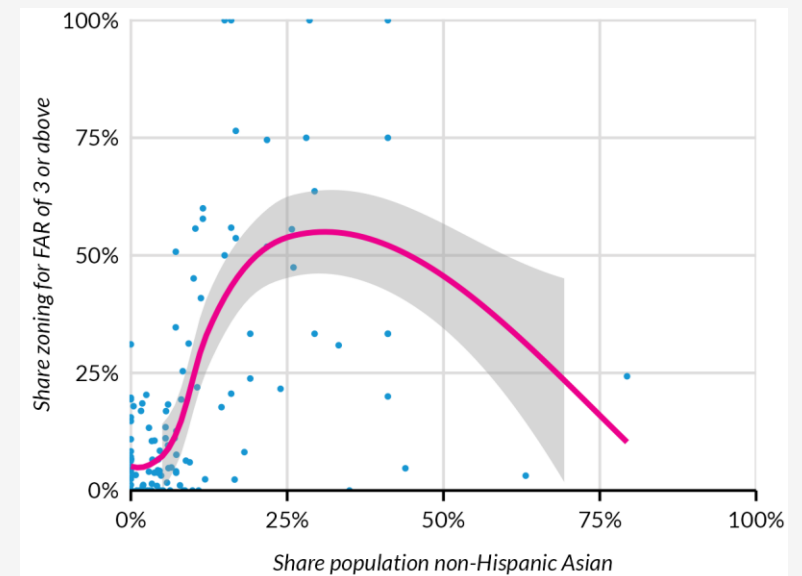

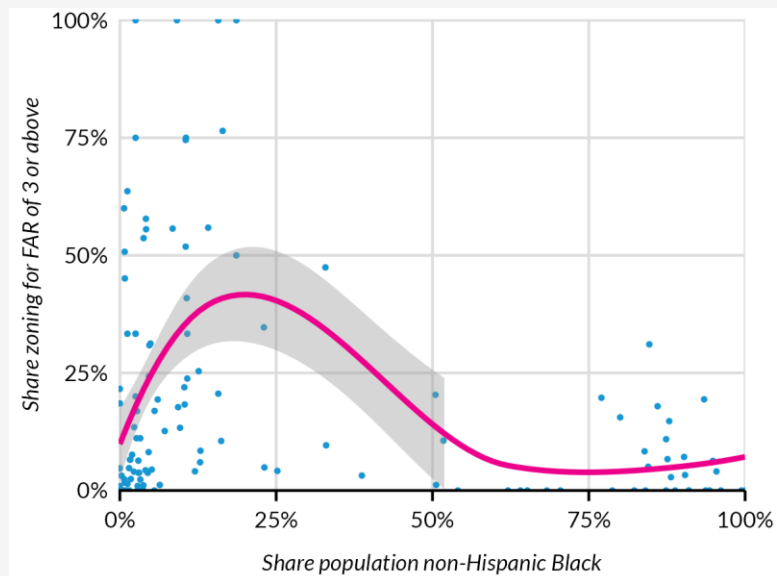

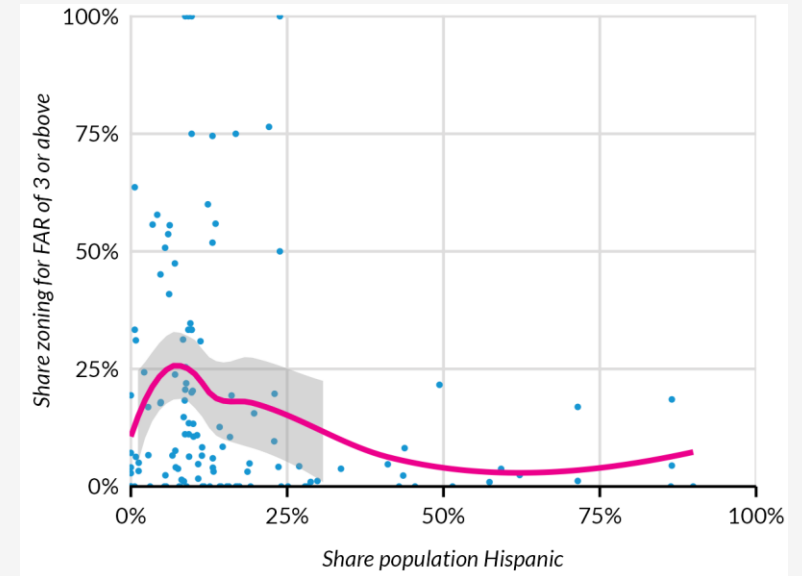

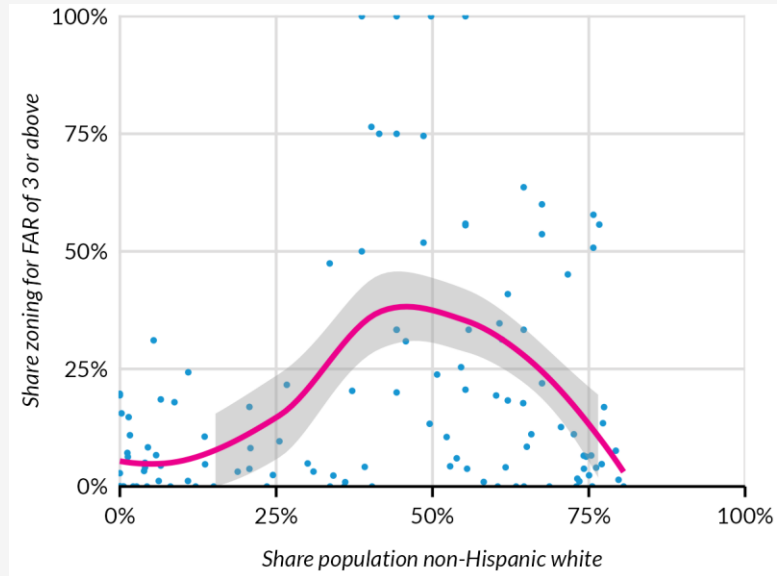

Each point represents a rail station area, by area zoned for FAR of 3+. Similarity based on Euclidean distance from city average of household income shares, divided into roughly evenly sized groups (<\$25,000; \$25,000-59,999; \$60,000-99,999; \$100,000-\$199,999; >\$200,000).

Station areas with racial and ethnic composition that match the city feature higher-density zoning

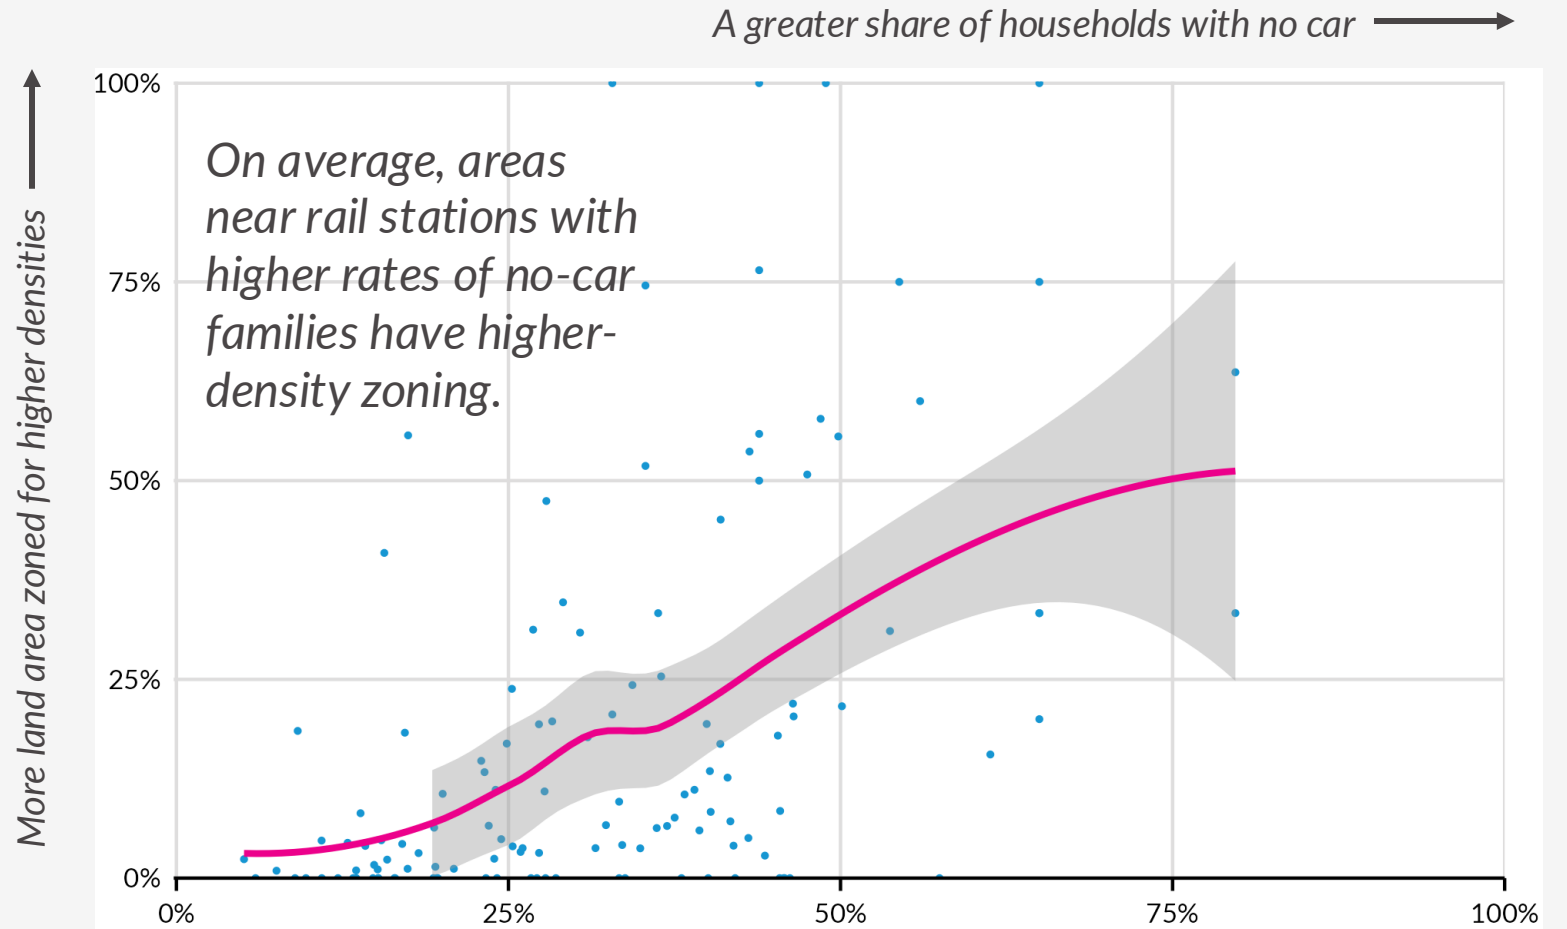

Each point represents a rail station area. Similarity based on Euclidean distance from city average of white, Black, Hispanic, and Asian population shares.

Zoned density levels vary based on the racial and ethnic composition of station areas

Each point represents a rail station area. Chicago is about 32% non-Hispanic white; 30% Hispanic; 27% Black; and 8% Asian.

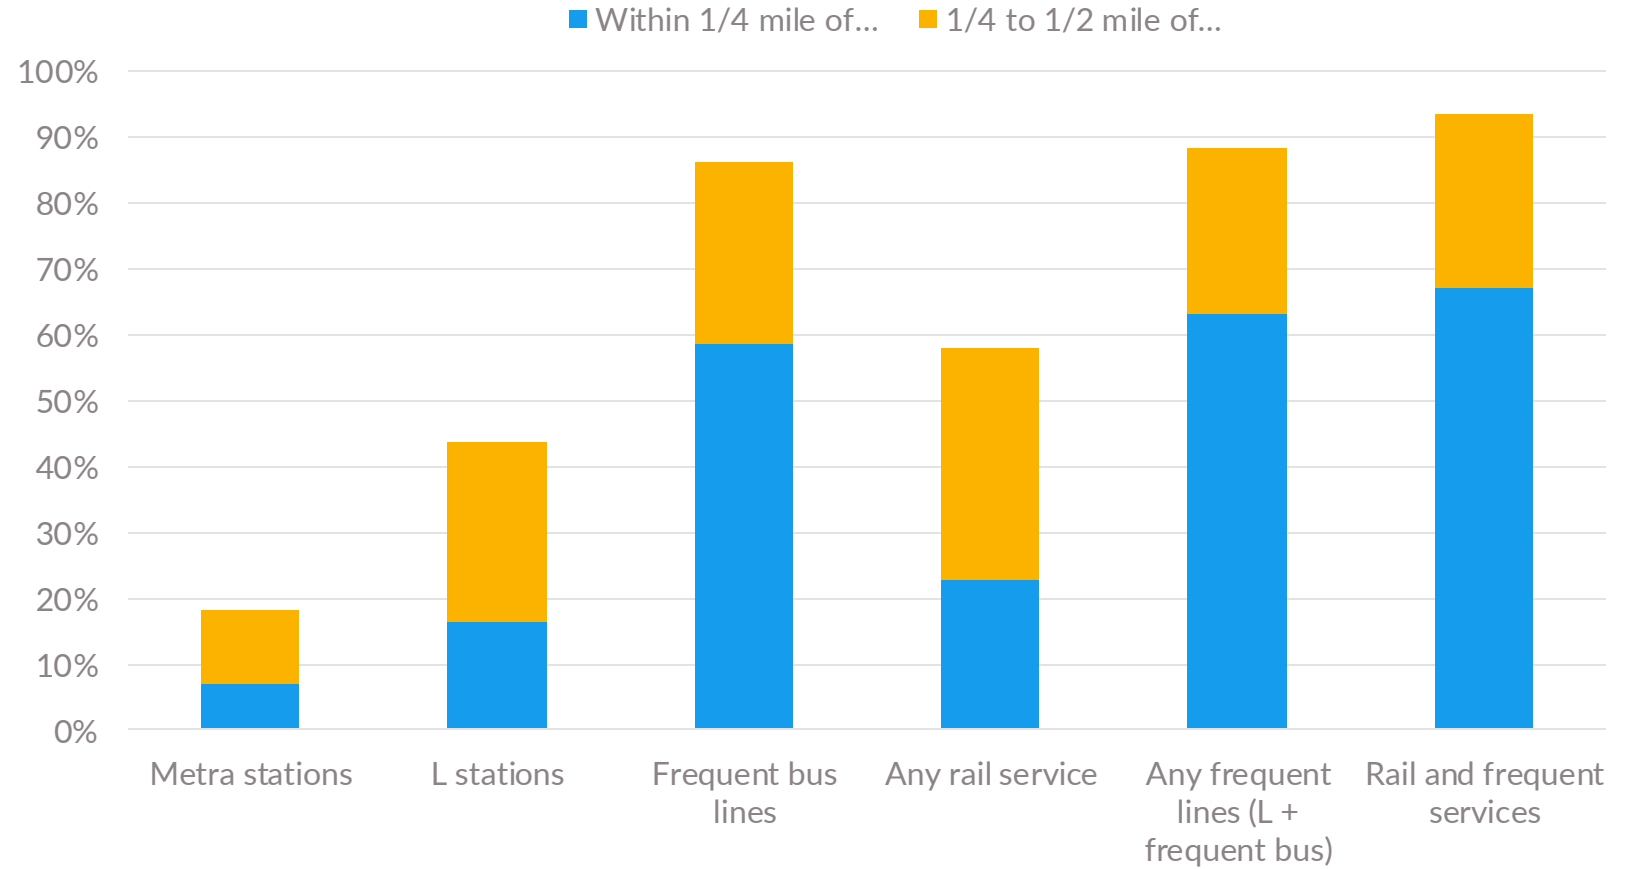

In general, allowed zoned density levels near transit increase with higher share of households with no car

Each point represents a rail station area.

Most city-owned parcels are located near the transit system

Share of the roughly 11,500 city-owned parcels located...

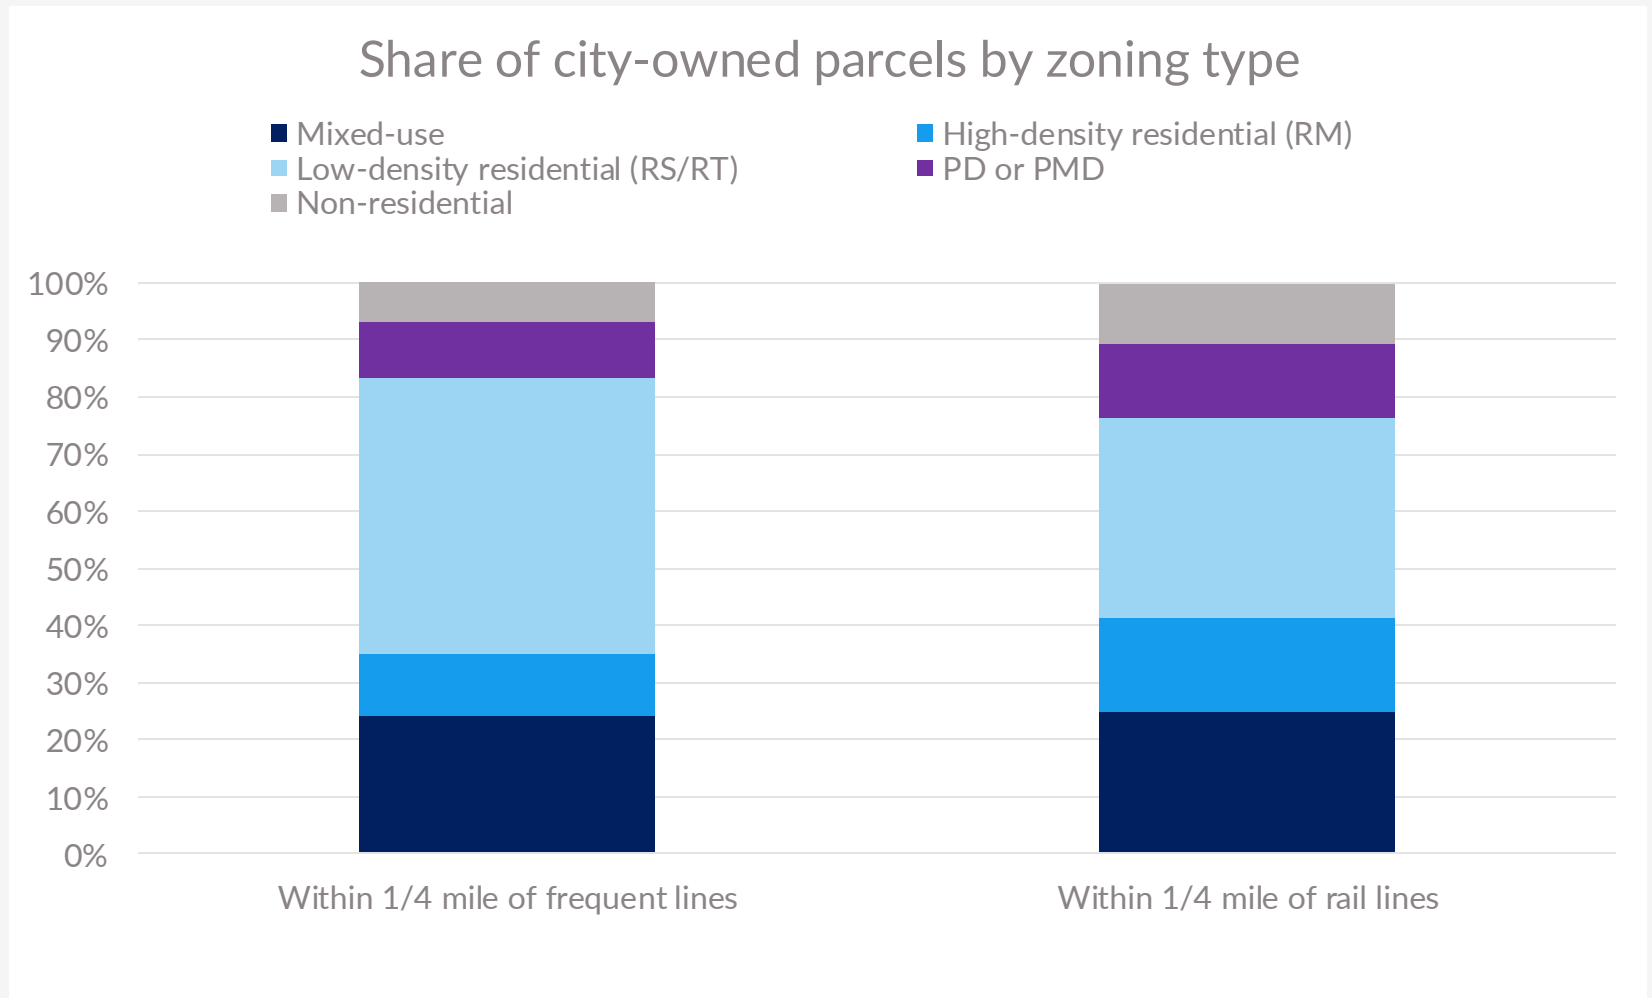

Includes both vacant and non-vacant properties.

Community areas with the highest concentrations of city-owned parcels near transit

Community area	Parcels within ¼ mi of frequent lines	Parcels within ¼ mi of rail lines
West Englewood	712	145
North Lawndale	703	145
Englewood	506	128
Grand Boulevard	466	226
New City	434	2
East Garfield Park	429	218
Near West Side	355	79
Austin	354	83
West Garfield Park	279	124
Humboldt Park	274	33
Woodlawn	265	98
Washington Park	234	160
Roseland	210	23
South Chicago	174	116
West Pullman	162	168

Only a minority of city-owned land near transit is zoned for mixed uses and/or high density residential

Includes both vacant and non-vacant properties.

Comparisons and Summary

Province has established clear requirements for cities to introduce minimum densities in areas near transit

Distance	Minimum FAR requirement	Minimum height requirement
200 m (about 1/8 mile) of SkyTrain (similar to L)	5	20 stories
200–400 m (about 1/8 to 1/4 mile) of SkyTrain	4	12 stories
400–800 m (about 1/4 to 1/2 mile) of SkyTrain	3	8 stories
200 m of commuter train or major bus terminal	4	12 stories
200–400 m of commuter train or major bus terminal	3	8 stories

FAR = floor area ratio.

Summary for Comparison: Best practices from British Columbia

Summary for Comparison: British Columbia requirements and Chicago zoning

Very little of Chicago's transit-accessible neighborhoods are zoned to allow densities mandated as standard for new development in British Columbia

Distance	British Columbia FAR requirement	Share of Chicago equivalent area zoned above FAR	Share of Chicago equivalent area <u>outside Loop</u> zoned above FAR	Share of Chicago equivalent area <u>outside Loop and allowing residential zoned</u> above FAR
Up to 400 m (about 1/4 mile) of SkyTrain or L	4 to 5	8.7%	6.4%	8.3%
400–800 m (about 1/4 to 1/2 mile) of SkyTrain or L	3	5.3%	5.3%	6.8%

FAR = floor area ratio.

A Summary of Key Findings on Transit Access and Zoning

- The city's transit system is well developed, but most people do not have access to frequent, reliable routes.
- Zoning policy has concentrated density and a mix of uses near transit, but these uses remain rare throughout much of the city.
- This may result in the city not taking best advantage of the transit system it has, and will continue to make it difficult for the CTA and Metra to bring back riders.
- Lessons from other communities suggest that higher density zoning is acceptable.

Data Sources

- City of Chicago Open Data bus route data and zoning data
- Transit Explorer rail station data
- US Census American Community Survey block group and tract-level data

Appendix

Transit options in Chicago

	Distance	CTA L stations	CTA frequent bus lines*	All CTA bus lines*	Metra stations
Share of land within	¼ mile	9%	40%	86%	6%
	½ mile	25%	64%	95%	20%
	Further	75%	36%	5%	80%
Share of population within	¼ mile	15%	46%	94%	7%
	½ mile	36%	72%	99%	20%
	Further	64%	28%	1%	80%
Share of housing units within	¼ mile	17%	48%	95%	7%
	½ mile	40%	73%	99%	21%
	Further	60%	27%	1%	79%

*Excludes land area occupied by Midway and O'Hare Airports. Pace also provides bus service in Chicago, and South Shore provides rail service. Their routes, however, are almost entirely overlapping with CTA and Metra services. The above data are non-exclusive. * We calculate distances from routes, not stations, for the bus lines.*

Most city-owned parcels are located near the transit system

Of the roughly 11,500 city-owned parcels, the share located...

	Within a quarter mile	Within a half mile
Metra	7.1%	18.1%
L	16.5%	43.6%
Frequent bus	58.6%	86.2%
<i>Any rail service</i>	22.9%	57.9%
<i>Any frequent service (L + frequent bus)</i>	63.2%	88.3%
<i>Rail and frequent services</i>	67.0%	93.6%

Areas near L experienced some gentrification trends, on average, compared to city and areas near Metra

Change from 2005–09 to 2019–23

	Pop.	Hsg. units	Share pop. white	Share with BA+	Med. income	Per-capita income	Rent	Hsg. value
Citywide	-4%	+3%	0% pt.	+12% pt.	+16%	+26%	+13%	-15%
Within ¼ mi of L	+6%	+13%	+1% pt.	+14% pt.	+21%	+27%	+25%	-11%
Between ¼ and ½ mi of L	+3%	+9%	+2% pt.	+14% pt.	+22%	+28%	+21%	-13%
Within ¼ mi of Metra*	-7%	-1%	-1% pt.	+7% pt.	+8%	+17%	+6%	-21%

Avondale	51%	16%	60%
Lincoln Square	50%	16%	73%
Rogers Park	92%	15%	68%

Near fixed-guideway transit means within a half-mile of a Metra or L station.

All community areas

High-density residential and mixed-use B/C/D zones are disproportionately located in neighborhoods near transit, particularly near the L.

	Total	¼ mi of L	¼ to ½ mi of L	½ mi of Metra	Further away
Total	231 mi ²	8.9%	15.8%	15.1%	60.2%
High-density residential	7.3 mi ²	24.0%	32.5%	18.9%	24.9%
Low-density residential	112.0 mi ²	6.5%	15.0%	17.1%	61.4%
Mixed-use B/C/D	24.1 mi ²	20.8%	20.4%	13.9%	44.9%
PD/PMD	44.8 mi ²	9.4%	15.7%	17.1%	61.4%
Non-residential	43.8 mi ²	5.7%	13.0%	13.8%	67.5%

Example reading of this table: In Chicago, 24.1 square miles of land area is zoned for mixed-use B, C, or D districts. Of those areas, 20.8% of land is located within a quarter mile of an L station, and 20.4% of land is located between ¼ and ½ mile of an L station.

All community areas

Areas nearest to the L are disproportionately likely to be zoned for high-density residential or mixed-use zones.

	Total	High-density residential	Low-density residential	Mixed-use B/C/D	PD/PMD	Non-residential
Total	231 mi ²	3.2%	48.5%	10.4%	19.4%	19.0%
¼ mi of L	20.5 mi ²	8.5%	35.5%	24.5%	20.5%	12.2%
¼ to ½ mi of L	36.5 mi ²	6.5%	46.2%	13.4%	19.3%	15.6%
½ mi of Metra	34.9 mi ²	3.9%	54.8%	9.6%	14.8%	17.3%
Further away	139.1 mi ²	1.3%	49.5%	7.8%	20.4%	21.2%

Example reading of this table: In Chicago, 20.5 square miles of land area is located within a quarter mile of an L station. Of those areas, 8.5% of land is zoned for high-density residential and 20.5% of land is zoned for a PD or PMD use.

All community areas

In most community areas, areas near transit stations have a greater share of their area zoned for high-density residential uses (including mixed uses).

● Areas within a half-mile of stations

● Areas further away
